Spectrum clones to be imported?

● **Spectrum compatible machines may be about to be brought into the UK.**

● **Sinclair export distributor MCI won't comment, but promises an announcement soon.**

Full details below and inside

MCI, the company which became the leading export distributor of Sinclair products immediately prior to Amstrad's Sinclair deal, is currently searching for stocks of Sinclair machines. It is thought MCI could be about to import the Brazilian Micro Digital Spectrum compatible machine, but the company would not comment specifically on this matter.

Although MCI was, until the crash, purely involved in export of Sinclair products, a spokesman would neither con-

Amstrad offloads its 48K Spectrum stocks overseas

AMSTRAD has succeeded in selling its surplus stocks of Sinclair machines to export house PST. The stocks involved are thought to be 20,000 QLs, 17,000 48K Spectrums and 14,000 16K Spectrums, leaving Amstrad with only the Spectrum Plus and the Spectrum 128 for sale in the UK.

PST is said to have paid £2.6m for the 51,000 machines – this averages out at £50 per unit, but considering the relative unsaleability of the 16K and 48K Spectrums in this country the unit price of these must have been much less. It is, in any event, a condition of the deal with Amstrad that PST sells the machines outside the UK.

Although the deal leaves Amstrad free to maintain the price of the Plus and 128 pending the launch of the Amstrad

The Plus – now minus a stable-mate

version of the Spectrum in September, it does nothing to help Sinclair dealers here, who have been experiencing supply problems with Sinclair machines and with Sinclair published software.

"Alan Sugar has built up a lot of enmity for himself," said one dealer, who didn't wish to be named. "I want to buy QL software, but I'm told the person he's sold it to has been instructed to sell out of the UK." This makes it difficult for smaller dealers to get hold of machines – particularly QLs – and well nigh impossible for them to obtain any of the software that was published by Sinclair.

Some of the software houses involved in Sinclair publishing deals are now sorting out a return to solo publishing, but it's still likely to be a month or so before the supply situation is sorted out.

Repairs to Sinclair machines are also a problem, as Amstrad is insisting that users take faulty Sinclairs back to the original dealer, and is then charging dealers for the repairs done. This is likely to discourage dealers from returning machines for repair, and will, therefore, make it more difficult for customers to have faults corrected.

Tape levy slammed

THE Government's plans for a 10 per cent levy on the retail price of blank audio tapes has come under fire from the tape manufacturers and – less predictably – the software industry.

Guild of Software Houses (GOSH) chairman Mike Meek said he couldn't comment in his GOSH capacity until after a meeting on the subject later this month, but said that he personally opposed the levy. "It's almost a licence to copy – and I wouldn't like such a licence to exist for the software trade," he said.

The levy is intended to take a share of the sales revenue of the tape manufacturers and give it to the music and software companies, but a large slice of this revenue will go on administration fees, and as the software industry is much smaller than the music industry, Meek's fear is that little or no money will come through.

His alternative proposal is to attack piracy at source, rather than give people a licence to copy. "Software piracy is very definitely against the law, and we should therefore be prosecuting the pirates."

CST's Thor

Second QL mark two

TONY Tebby's rival to the Thor (see review page 10) now exists in prototype form, although it is far from being a saleable QL mark 2.

Tebby has completed a circuit board design which will operate with QL Rom chips, but the machine still awaits keyboard, disc and various interfaces. The machine is intended for Autumn launch at £499, but further development of the 68000 system depends on further finance for the project.

Meanwhile, it appears that a third 'Son of QL' machine is being mooted by QL add-on supplier Sandy.

Spectrum clones imported?

◀ continued from page 1

firm nor deny suggestions that it was about to reverse the process and bring machines back into the UK. He did say, however, that an announcement was due in the next few weeks.

The new distributor arrangements at Amstrad have meant that a number of companies previously involved with Sinclair have been left out in the cold (see separate story). This has fuelled speculation that some of them will be involved in the production of Spectrum compatible machines along the lines of Micro Digital's. Although a surge of compatibles would follow in the tradition of the IBM PC, which spawned a host of imitators, a Spectrum compatible begs a number of questions that don't apply to the PC.

Disc-based machines like the PC can be compatible with one another because their on-board BIOS is relatively small, and the operating system can be licensed from software houses such as Microsoft. The Spectrum, however needs to have full-blown operating system on board, and the original is now owned by Amstrad.

In addition much Spectrum software uses Rom calls, and it would be difficult to get it to work on a compatible without infringing Amstrad's copyright.

Is Sinclair's Loki fated to stay in Limbo?

THE Loki Super Spectrum games machine under development at Sinclair Research immediately prior to Amstrad's purchase of the rights to Sinclair machines stands little if any chance of seeing the light of day.

The Loki was intended to have 128K of Ram, and would use a souped-up version of the Z80 processor running at 7MHz plus two custom chips and dual ported Ram (allowing two things to access it at once) in order to speed it up. The intention was to produce the machine as a £200 version of the amiga, and the blueprint is now in Amstrad's hands. However, it is thought that the project was not very advanced at Sinclair.

According to one Amstrad insider, however, Amstrad has no intention of doing anything with the machine, and the sums involved in producing the Loki would be too great for anyone but Amstrad – even if Amstrad's agreement could be obtained – to produce it.

The problems involved are based on the twin custom chips and the wealth of I/O connections, which consist of practically anything you'd ever want on a micro.

The custom chips require a heavy financial commitment in terms of development, while the I/O ports, if they can be included for £200 at all, would require massive sales.

"It could work, but it would have required Sinclair to put in a lot of investment", says Spectrum expert Andy Pennell. He feels that the custom chips and dual ported Ram would allow the machine to run fast despite the relatively slow processor, but suggests that the complexity of the project would probably have meant Sinclair killing it in the end anyway.

The MTX 500 – due for rescue?

Memotech rescue plan due to be finalised this week

AN announcement on the future of Memotech was expected as *Popular Computing Weekly* went to press.

The company is currently in liquidation, but Geoff Boyd, one of Memotech's original founders, has formed a new company, Memotech Computers, with a view to continuing production of the company's MTX series of machines.

A spokesman for the new company said that, pending a meeting to be held this week, he couldn't confirm what Boyd's plans were, but Memotech Computers is thought to be negotiating the purchase of Memotech's assets.

In addition to the MTX series of microcomputers these will probably include the new Memotech machine currently under development.

Shogun's to show, but Dan still suffers delays

IF you thought that the *Shogun* and *Dan Dare* games were just a figment of Virgin's imagination, think again.

The two long-awaited titles are now nearing completion and *Shogun*, at least, is scheduled for release at the end of this month.

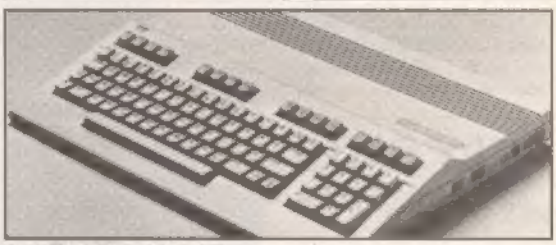
Shogun will be available for Amstrad and Commodore machines and involves you, as any one of a number of characters, gathering loyal followers in order to become shogun of ancient Japan. The game will cost £9.95 on cassette, £12.95 on Commodore disc and £14.95 on Amstrad disc.

Dan Dare is being programmed on Spectrum, Commodore and Amstrad machines, but Virgin has not decided on a release date yet, and may hold it back until the autumn. On the Spectrum, *Dan Dare* will be a graphically sophisticated arcade game, on the Commodore, a 'no-text' adventure, with the Amstrad version offering more in the way of a mainstream arcade adventures.

Kuma produces a guide to the ST

KVMA Computers has produced its first book on the Atari GT, *The Atari ST Explored*, by John Braga. Topics covered include Gem, TOS, the ST's BIOS and Logo. A guide to 68000 assembly code is also included, along with details of system variables.

There are also chapters linking the machine to peripherals. The book is available now, price £8.95.



A graphic o/s 64 may join the 128.

Commodore grabs De luxe packs from Ariolasoft

COMMODORE has hijacked Electronic Arts' *Deluxe* range of programs for the Amiga from Ariolasoft, and is to offer them bundled with the Amiga. Ariolasoft announced the release of *Deluxe Video*, *Paint* and *Print* in this country at the end of March, before the Amiga was even launched here. Commodore, however, seems to have outbid the company.

"The contract with Electronic Arts allows them the option of doing OEM products over a certain amount", said an Ariolasoft spokeswoman, "and the *Deluxe* products fall into this category." Ariolasoft will, however, continue to sell Electronic Arts' entertainment software.

Commodore UK's acting general manager Chris Kaday wouldn't confirm the bundling deal, but said there would be an announcement shortly. He also refused to comment on suggestions that the repackaged Commodore 64 (see *Popular Computing Weekly*, 15-21 May 1986) would include a Rom-based version of Berkeley Software's Geos graphic operating system. "I can't deny we're looking at options", he said, "and there may well be future developments to the system."

Product News

Prospero produces Pascal and Fortran for ST series

TWO MORE language implementations have been announced for the Atari ST range of 68000 processor-based microcomputers. Prospero Software has launched Pro Pascal and Pro-Fortran-77, both compiled ANSI-standard versions.

Both languages offer full support for GEM and ST graphics, allowing programmers to create stand-alone applications conforming to the GEM standard. Both are priced at £148.

Details from Prospero Software, 190 Castlenav, London SW13 9DH (01-741 8531).

Tasman gets set for PCW word processing package

TASMAN SOFTWARE is to launch a PCW8256 and 512 version of its Tasword word processing program at next month's Amstrad show. The new version will be called Tasword 8000, will have a 90 × 32 character screen and Two fonts, and will sell for £24.95.

Details from Tasman Software, Springfield House, Hyde Terrace, Leeds LS2 9LN (0532 438301).

Hisoft C's niche for new compiler

HISOFT has released HiSoft C 1.3, a new version of its Spectrum C compiler. Version 1.3 is smaller, allowing larger programs to be compiled, and runs around 25 per cent faster than the previous version. It also includes a code optimiser which makes compiled programs smaller and faster, and has more Unix System 3 library functions added. These allow Spectrum C programs to be ported across to other machines running HiSoft compilers fairly easily.

Details from HiSoft, 180 High Street North, Dunstable, Beds LU6 1AT (0582 696421).

MicroPro gives Astron business support

BUSINESS software publisher MicroPro is launching SuperScript, its word processing package for the Commodore 64 and 128, on Astron Rom card in July.

The company will be selling the credit card sized Astron card together with manual and an adaptor to plug into the micro's I/O port for under £100. Upgrades will be available for existing SuperScript users.

Details from MicroPro UK, Haygarth House, 28-31 High St, London SW19 5BY (01 879 1122)

Seven Stars launches NLQ printer driver

QUALITAS is a printer driver utility from Seven Stars that allows Tasword to print in near letter quality (NLQ) on printers compatible with the Epson RX80.

Five fonts are supplied, and these can be redesigned using the font editor supplied in the packages, allowing foreign accenting or even non-Roman alphabets to be designed.

The package uses two passes of the printhead with quadruple density graphics plus micro linefeeds to achieve NLQ.

The Tasword 2 version is out now, price £7.95, while the Tasword 3 model will be available in June, price £8.95.

Details from Seven Stars Publishing, 34 Squirrel Rise, Marlow, Bucks SL7 3PN.

Letters

An interest

Thank you for the nice reviews of our products in your 8 May issue, Education Supplement. It is very pleasing to see the popular computer press taking an interest in educational software.

David Atherton
Software Manager
BBC Publications

Unfair criticism

Since I started the correspondence concerning bugs in Atari ST Basic, perhaps I might be allowed to reply to Mr Rosenvold's defence of the machine (Letters, 8th May).

Although not disputing that the Atari Basic is so badly flawed as to be unusable, Mr Rosenvold says that criticism is 'fundamentally wrong' because the machine can run 'better' languages such as Pascal or Forth. If Mr Rosenvold prefers these he is entitled to his view, but most purchasers will expect to be able to use the 'powerful' Basic supplied with the Atari. Fancy buying a new car, only to find that it doesn't work because of incurable faults with its 'powerful' petrol engine, and that you are expected to go out and buy a diesel engine!

Mr Rosenvold is most fortunate in getting the right answer every time when running Mr Hewsons's program; I get the wrong one more often than not, and Atari have told me that the bug which causes this is present in every machine. The criticism of Mr Hewson's programming style is both unfair and misplaced. Unfair because the form was probably only adopted as the simplest means of demonstrating the fault, and misplaced because the use of string variables is not only permissible but indeed, with random file handling, the only method possible.

David Loverseed
Bramhall
Stockport

Delayed service

Spectrum owners are not the only ones having trouble with repair delays. My five month old CPC 464 recently went to be repaired under guarantee, and came back seven weeks and three days later.

That's not good enough. A spin dryer costing around a quarter as much again was repaired under guarantee the next day, and it didn't have to be carted miles.

The sooner the industry gets some form of service contract going (as with domestic items), the better.

F E Lane
Woolton Bassett
Wilts

Ultimate Basic

I have two points to make following articles and letters in your magazine.

1. If Jack Tramiel intends pushing his ST machines into the educational market, he must first rewrite a new Basic. He should learn a lesson from the IS Basic on the Enterprise computer, which is widely regarded as the ultimate Basic amongst reviewers. His Basic contains little of the features needed to make a good structured program with good use of the machine's flexibility. Enterprise has.

2. I was amazed when I read the editor's reply to A D Ponting's letter in issue No 19. It says "we cannot print articles for which we have no copy". I recently had a program sent back from your reviewer with a letter saying, "I've been hanging on to this to see if there'd be any demand for Enterprise listings – alas not". Proof that you do receive copy.

Can I assure the computer industry that a demand does exist in greater numbers than you would expect. Also I'd like other computer manufacturers to learn from Enterprise in how to treat and give service to their customers.

User group

I am starting a user group for Electron owners, and would be grateful if you could publish my full address so that potential members can contact me.

While based in Cheshire, I would welcome enquires from

Star Letter

A difference

Can I bring to the attention of your readers a new computer user group – but one with a difference.

The Spectrum Unemployed User Group is for Spectrum owners who are currently unemployed. Membership is free and in addition to help with computer problems (and in dealing with the DHSS), we publish a monthly tape-based magazine containing games and utility programs.

The only cost is postage for the magazine and 5p to cover the production costs. Please not that membership is open only to the unemployed. If members find a job, we throw them out.

Anyone interested should write to the address below.

M Sleight
Spectrum Unemployed User Group
109 The Avenue
Bentley
Doncaster DN5 0PS

Sounds like a good idea, but why only Spectrum owners? There must be plenty of other computer owners in the same position.

Puzzle

Puzzle No 209

Take a piece of card and cut out two circles, one slightly larger than the other. Now draw equally spaced radii to divide the discs into one hundred sectors. Using a fastener through the centres of both discs, fasten the smaller disc on top of the larger so that it can rotate freely.

Each of the sectors on the smaller disc should be numbered from '00' to '99' in sequence in a clockwise direction. Similarly, the larger disc should also be numbered, but in an *anticlockwise* direction.

The diagram shows a part of such an arrangement. At any given setting the discs will display 100 numbers. For example, those shown in the diagram are 9803, 9902, 0001, 0199, 0298, 0397, etc. By rotating the smaller disc to each of the 100 positions, different sequences of numbers will be generated.

At what position should the disc be set in order to produce the maximum number of primes? For your answer please state which number on the *outer* disc should be adjacent to the '00' on the inner disc, and state the number of prime so obtained.

(Note that the value 1 is considered prime in this puzzle.)

Solution to Puzzle 204

In carrying out the operation as described, the most primes are produced when the top card is 91. In this case 24 out of the 100 numbers will be prime.

The program tests each of the 100 possibilities which result with the different start positions in the pack. Each successive total is summed and is tested to determine if it is prime in the subroutine (lines 500 to 560). As each prime is encountered the array variable whose subscript corresponds to the start value of the pack, is incremented by one.

At the end of execution of the program, the array is scanned to determine the number of primes obtainable with each run-through of the pack.

Winner of Puzzle No 204

The winner is Martin Fisher of Marston Moreteyne, Beds, who will receive £10.

Rules

The closing date for Puzzle No 209 is 17 June.

anywhere, as the group will be postal. There are no fees, the idea being to encourage contact and help between members. I will probably produce a cheap but informative newsletter to which members will contribute.

Finally, could I ask that enquirers enclose a stamped addressed envelope for a reply.

Michael O'Donnell
5 Worthington Close
Runcorn
Cheshire
WA7 2QG

Still waiting

I K Sanders of Worcs and D Scott of Hawick think they've got problems with their Spectrums now that Alan Sugar has taken over, then mine beats the lot.

Last January I ordered a new casing for my 464. I sent my postal order for the amount agreed and waited . . . and waited. I have rung them several times and variously been told that it's on its way, that it's out of stock, that a shipment was expected, it might be on the next shipment.

I have now written to them and I am still waiting.

P Clarke
Sneinton
Nottingham

Strange excuses

Some strange excuses have been put forward for computer design faults, but that offered by Kristian Rosenvold in respect of the problem with the Atari ST – Basic is only provided so that you will buy the machine, you aren't expected to actually use it – must be the most outrageous yet.

Norway has perhaps been singled out for special versions of the Atari, because I have run Mr Howson's program on all the 520s I could find on dealers shelves, and they all give the wrong answer on the second and subsequent iterations.

Mr Rosenvold is however quite right that string variables take longer to process; with the wholly numeric version of the program listed below the Atari is much faster at getting the wrong answer. However it is still very slow – further checks with a counting loop added showed that the Amstrad PCW ran ten times as fast (and got the right answer).

```
10  defdbl a-b
20  a=99999999999:b=a
30  open"O",1,"test":print#1,
    a:close
40  open"I",1,"test":input#1,
    a:close
50  print a-b
```

P Cuthbert
Cambridge

PS It would be unfair to dealers if everyone went round trying display models to see what answer the Atari comes up with – it gives minus 8192.

"So Thor, Odin and Loki aren't members of Abba after all!"

Thor – god of thunder?

John Lettice takes a close look at CST's Thor micro, based on QL technology, and evaluates its chances of success

Rumours of the death of the QL were, it would seem, greatly exaggerated. A few weeks back, even as Alan Sugar was knocking the machine firmly on the head, work on its successor was in progress.

Son of QL, produced by Stevenage-based QL add-on manufacturer CST, now exists in prototype, and is scheduled for launch at the *Personal Computer World* show, in September.

The machine is the Thor, and it will be available in two basic versions, one sporting a single 720K floppy and costing £550, and the second equipped with one floppy and one 20Mb hard disc for £1,300. The casing of the machines has been subject to a radical redesign, and now houses a wealth of I/O slots along with the original QL circuit board. Microdrives are conspicuous by their absence.

The Thor is actually the QL mark two – the machine that has been subject to Sinclair's on-off plans for the QL's successor.

This project was repeatedly cancelled and re-adopted in the year prior to Sinclair's sale to Amstrad, but while its future with Sinclair was never certain, CST, to which Sinclair had subcontracted the development work, continued work on the machine that was to become the Thor.

Thor is essentially a radical repackaging of the QL. It consists of a compact steel box housing main circuit board, Ram expansion to 640K, ports for the QL's standard I/O plus Centronics and mouse ports. Production machines will also sport four Rom slots internally.

The disc drives and interfaces are housed in the front right hand side of the box – the whole shebang is decidedly full up and crowded, but the QL's expansion bus has been re-routed round to the back, and really serious expandaholics will be able to buy an expansion box to plug into it from CST.

New keyboard

The keyboard is one of the more interesting points about the current prototype. Sinclair's wobbly Scandinavian designed keys have been thrown out of the window (CST's neighbours will be complaining about the mess in the back garden if the Thor really takes off) and have been replaced by one compatible with the IBM PC AT.

The layout of this differs from the QL layout, but most of the IBM-specific keys have been wired in, and the rest will be dealt with on the production machines. These will include IBM's *Print Screen* key, which will actually have a screen dump routine patched into it rather than simply dumping the characters from the screen, as it does on IBM machines.

The feel of the keyboard is streets ahead of the standard Sinclair feel, and although I personally didn't feel it matched the classiest of IBM compatibles it's still good, and at this level feel is largely a matter of taste.

Because the Thor is still essentially a QL there should be no problem with running software – provided it's on a 3½ inch disc, that is.

David Oliver of CST says he's been looking at the Microdrive transfer problem, and proposes to operate some kind of data transfer facility for users who are upgrading their machines.

Program software is a little trickier, firstly because it may be protected and secondly because copying it from microdrive to disc is illegal, but CST will be asking software houses for some kind of blanket permission to transfer programs, and the incentive should be there.

The company has some ammunition that should help it secure this permission, in the shape of 'water marking' of machines.

This will be analogous to a 'dongle' in many respects. Each machine will have its own individual code number which will be transferred to applications software discs before the application can be used.

Individual disc programs can therefore only be used by the machine they were installed for – or to be more precise, one machine in 256 – and there's therefore no need for further copy protection. Users can therefore take as many backup copies as they like, because they'll only work on their machine.

CST also intends to put window/icon software on the machine to run with the mouse. This wasn't installed on the machine I saw, but marks a change from Sinclair's earlier resistance to the idea of windowing front ends.

Multitasking

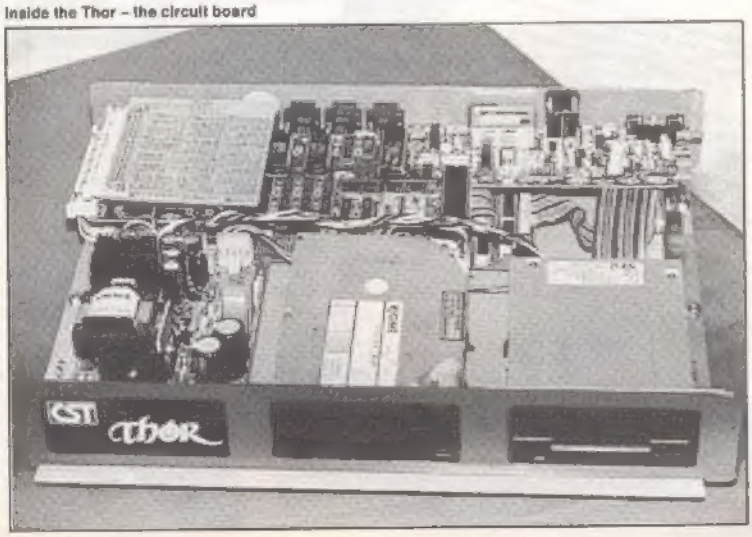
It may seem illogical for CST to develop its own system when Digital Research's Gem, which runs on the Atari ST, is available off the peg, but Oliver points out that Gem currently won't multi-task, and that it's important that the QL's multitasking capability is maintained both from the point of view of existing users and from the point of view of future developers.

But CST isn't ignoring the ST altogether, and is considering development of some kind of emulator allowing the Thor to run some Atari software.

The Thor's status is slightly confusing, in that it's part new machine and part upgrade.

CST will be offering it as an upgrade to existing QL users, but will also want to produce complete units for new purchasers, both corporate and individuals sever-

Inside the Thor – the circuit board



The Thor system – note the new keyboard

al of whom already exist.

Oliver says he's already been approached by both individuals and organisations, one Eastern Bloc would-be purchaser in particular, is making noises about 20,000 units over five years. The latter's chances of getting a hi-tech machine like the QL through export controls are, it must be admitted, somewhat dubious, but the request is an indication that CST's eventual production target ■ 1,000 machines a month errs, if anything, on the modest side.

Circuit board supply

But where are the circuit boards to come from? CST needs to get its hands on ■ steady supply of these, and Amstrad, which gives the impression of preferring export to Rockall to discount ■ Dixons as a fate for the QL, isn't a likely source. CST, however, says it has identified a source willing and able to supply circuit boards for the foresseeable future, and says this source isn't subject to any right of veto by Amstrad

The next step for CST, the QL mark three, is already being planned. This should appear in 1987, and will use the Motorola 68020 processor, which is the fully 32-bit version ■ the QL's 68008. It will almost certainly incorporate hard discs, as CST predicts price reductions in this even in the next year or so.

This variant sounds very much like the QL the world briefly thought Sinclair had launched two years ago.

Its hardware will incorporate multitasking, which means text windows won't be overwritten by other windows, and will all remain active, changing even when they aren't on view, and will initially incorporate 1Mb of Ram made up of 256K chips

The sockets for these, however, will be wired ■ accept 1Mb chips, so although the first machines will be able ■ have a "mere" 4Mb ■ Ram on board fitting 1Mb chips will allow you a much roomier 16Mb

Will it succeed?

Because the multitasking will be hardware rather than software the system software will also be upgraded ■ produce much more sophisticated windowing than on the current Thor.

But will it succeed? When the original QL was launched ■ 1984 many people, including myself, pegged it as the next micro breakthrough

Its conspicuous failure to shape up as the world-dominating micro we thought it would be ■ the intervening period surely proves that it was after all a daft idea, best dead, best forgotten

We've all been a little sensitive about earth-shattering wonder machines since that particular debacle.

That's one way of looking at it. But look at the way the micro market has gone since then, with the launch of 68000-based machines like the Atari ST and Amiga, and think a little about where the software and hardware support is going to be over the next couple ■ years

There's now so much 68000 experience around that any half-way decent machine based on this processor, and selling for a reasonable price, stands some chance of carving out a section of the market for itself, now that the programme are there.

Magic in the name

Now think about the QL. It hasn't achieved the success of the 64, the Spectrum or the Amstrads, but it has a decent sized user base, and the magic of the Sinclair name (ill somewhat faded now) means that it still has the support of many competent hardware and software support companies

The QL is therefore at the right price, and with the right amendments, poised to take advantage both of existing support and of the impending 68000 boom Now it would probably be just plain foolhardy to expect the QL in any form to sell 500,000 units at this stage in its life, which is why Amstrad isn't interested, but although Sinclair probably thought ruefully that 50,000 units over two years is pretty small potatoes, volume sales do not necessarily a successful machine make.

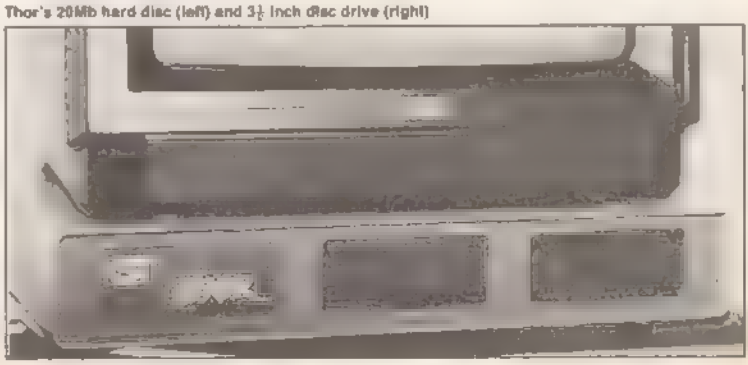
CST accepts this, and is gearing its production to cater for a small but steady number of sales.

No way has the company either the resources or the inclination to start making Tramiellish noises about world domination, but because of its experience producing low runs of add-ons it is actually well placed to make a success, ■ only ■ moderate one, of the Thor

Thor is planned for launch at the PCW show in September at the prices quoted above. CST can be contacted at 24 Green Street, Stevenage (0438 352150).

John Lettice

Thor's 20Mb hard disc (left) and 3½ inch disc drive (right)



Plenty of features, facilities and options

There have been so many "machine code development systems" consisting of no more than a simple assembler and monitor that it's a pleasure to find a product truly deserving of the title.

Laser Genius is the latest from Ocean's IQ range, developed by Oasis Software of White Lightning/*Laser Basic* fame. *Laser Genius* originally started life as Oasis' own in-house programming tool, so it was written specifically for professional use – and it shows.

In terms of features, facilities and options *Laser Genius* is flawless. It comes as two programs, although it can be thought of as three modules – assembler, monitor and analyser.

The first program is the assembler/monitor. This includes a first-class editor featuring auto-number, renumber, find, and search-and-replace functions. The assembler is a full, two-pass macro assembler, and source files can be assembled in memory or to disc/tape. If the latter option is chosen, separate files can be linked and assembled.

Having the monitor co-resident in memory is ideal as it allows you to examine memory, move or compare blocks and so on. This makes machine-code programming a good deal more interactive than is usual.

The assembler supports 14-character labels which makes programming a delight since you can use labels like Screenbase and Commandloop instead of Scrnbse and Loop1, for example. With sensible and widespread labelling, *Laser Genius* turns assembler into something approaching a high-level language.

This impression is reinforced by some of the other features, notably the macro support, the ability to merge previously debugged subroutines, and conditional assembly.

The monitor/analyser is a dream. In addition to standard monitor features, the analyser greatly simplifies the debugging of your programs.

The screen is split into four windows showing all 6502 registers, a disassembly of your program together with the analyser stack, a memory dump in hex and ASCII, and a command window showing your commands and analyser messages.

The analyser itself is a Forth-based program with too many features to discuss here. However, it allows you to do an automatic slow run of your program, or single step, with or without trace. Multiple stop conditions can be set to allow the examination of registers

and memory locations.

If there had to be one criticism, it would be the documentation. Although it's comprehensive in the sense of a reference guide, I'd have loved a "walk through"; one example program demonstrating the editor and assembler, through to saving and examining the subsequent object code. The analyser, perhaps because it's different, is treated in this helpful way.

That aside, *Laser Genius* lives up to its name. Obviously something this complex is not going to be mastered in a few hours, but once you've got the hang of it, it will do everything but write your programs.

Anyone who is serious about machine-code programming on the 64 should rush out and grab a copy.

Peter Worlock

Program *Laser Genius* **Micro** Commodore 64 **Price** £19.95 (disc) £14.95 (cassette) **Supplier** Ocean, 6 Central Street, Manchester M2 5NS.

Green fingers

Now that summer is here with the usual dodgy weather, it's time to come in from the garden and put your computer to good use. *The Planter's Guide* from Phoenix Publishing is a database of plants, complete with soil and light conditions. The program is menu-driven, and the initial menu offers the options of searching for a plant (heather, conifer, shrub or climber) to suit the conditions in your chosen spot, or the conditions to suit your chosen plant. Once the database has found all the plants that will fit the parameters, the user may flip through the selection.

The accompanying booklet runs to 130 pages of about ten entries on each page (though a few pages are devoted to very useful information on planting, soil testing and so on) – it is to these entries that the user is referred (don't lose the book, because no on-screen references are made to the plant names).

An endearing feature of this friendly and easy-to-use program, is that the authors have not protected the listing from perusal, thus allowing the user to alter the program to taste or save it to disc. It is a pity, however, that there is no easy way to add entries to the database. Though the program is not as fast as, say *Masterfile*, it's quite adequate for the browsing gardener, and should prove a very useful addition to the trowel and manure.

Tony Bridge

Program *The Planter's Guide* **Micros** Amstrad, BBC, Spectrum, Commodore (all on one tape) **Price** £14.95 **Supplier** Phoenix Publishing, 14 Vernon Road, Bushey, Herts WD2 2JL.

Organised finances

Well, now you've got your Psion Organiser II, you might as well attempt to get your finances organised. At least, that is the aim of Psion's *Finance Pack*, for the Organiser II (both CM and XL models).

The package consists of a Datapak containing the finance programs, which simply slides into one of the drive slots and on power up, a new item, *Fins*, appears on the options menu. On selecting this, you are presented with a sub-menu from which you can select the following seven functions: expenses, bank, NPV, IRR, compound interest, bond, mortgage and APR.

Of those seven, maybe only three or four are going to be of everyday use (net present value, internal rate of return and redemption rates of corporate gilts are not generally things you'd come across this side of Threadneedle St).

The expenses option is obviously going straight for the middle management niche – it allows you to enter and date business expenses under different categories (meals, travel, petrol, etc) into your Organiser.

The bank option, on the other hand, could be of more genuine use. This lets you set up a complete record of all your banking transactions – and it's got quite a few nice touches. Cheque numbers are automatically incremented as you enter them, and as with expenses, you can enter a short text description. Standing orders are automatically dealt with, via access to the system clock. If kept up to date, this program will give you an immediate theoretical balance reading.

Psion recommends that the bank files are kept on Datapak – and that a 32K pack should hold about three years worth of transactions. Note, however, that there is no kind of security at all on these files.

If you already own an Organiser II and are using it for your phone numbers, then it might be worth the money to add these extra features to your machine. But, this package is not reason enough alone to make the purchase.

John Cook

Program *Finance Pack* **Micro** Psion Organiser II **Price** £29.99 **Supplier** Psion Ltd, Psion House, Harcourt Street, London W1H 1DT

Reach for the tranquillisers

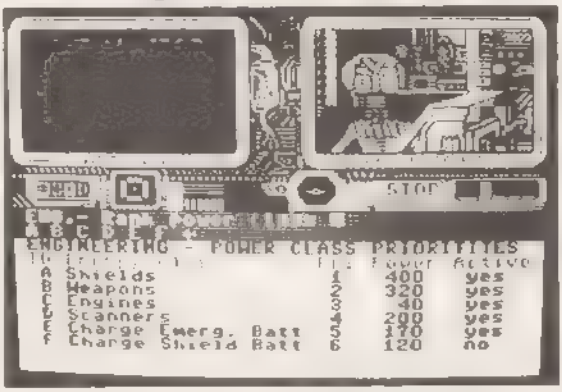
Having run out of new kinds of games, many software companies are now merging two or more existing types for their latest releases. The *Psi-5 Trading Company* is one of these.

Courtesy of Accolade/US Gold, *Psi-5* is a hybrid of the old space shoot 'em up, a flight simulator, and a trading game, in which you play the part of the captain of an interstellar freighter.

Your mission begins by selecting five crew members from 30 applicants to handle various shipboard functions like weapons, navigation, engineering, repairs and scanning. With crew in place, you load up a cargo, select a destination and head out for the wild (really wild) blue yonder.

Your crew members have different strengths and weaknesses, and some have a low boredom threshold so if you don't keep an eye on your weapons specialist, he/she/it may start blasting friendlies for the hell of it.

You'll have your hands full just keeping track and issuing orders to the various departments, making sure you don't slip behind schedule (your cargo will otherwise perish and you lose money).



When the hostiles arrive things really get interesting. You must switch rapidly between scanning and weapons, ranking targets ■ changing priorities and making sure you don't zap innocent bystanders (their governments sue for compensation).

As the screens start shaking under missile and blaster impacts, and various departments jam your communicator with incoming messages, and as you have to start including damage control in your plans, you'll find yourself stabbing the pause key and reaching for the tranquillisers.

The graphics are wonderful, and gameplay ■ fast and furious. I don't know much about the trading aspect because I never once survived long enough to sell anything. This would be one (minor) complaint – the easiest mission should provide a more encouraging introduction.

The major complaint is about the documentation – it's lousy. Not only is it sketchy on some fairly crucial aspects of play, it's printed in tiny type, made worse because it's printed dark blue on black. US Gold should have their white sticks broken for this one.

But if you like a game that will bend your mind to breaking point, *Psi-5* is the one.

Peter Worlock

Program *Psi-5 Trading Company* **Micro** Commodore 64 **Price** £9.95 (cassette) £14.95 (disc) **Supplier** US Gold, Unit 10, Parkway Industrial Centre, Heneage St, Birmingham B7 4LY

Three set points

Crumbs, it's almost Wimbledon time again – ah, the glorious sound of thwack ■ leather on willow . . . no, that's something else isn't it, rather, the thwang of furry

individuals rushing around the court, the obscenities uttered by the circuit stars.

The latter can be simulated very realistically when it takes four attempts to load the game – for now it is *Tennis* by Bug Byte we are talking about.

This is definitely a cheapie, and for that I can forgive the flickering ball and relatively slow action.

The game ■ one player only, in that you play against a variety of computer controlled opponents with silly names (that is, you start off with Manuel Fawlty, who nips around the court with considerably more skill than he ever waited at table down in Torquay.)

Controls are simple (left/right, up/down, fire) but there are the extra options to freeze the screen and switch off the music. Other nice touches are the ball boys who zoom on and off court to pick up the stray shots. I found myself quite enjoying *Tennis*. ■ I could only find a way to balance the strawberries and cream on the keyboard.

John Cook

Program *Tennis* **Micro** BBC B/Electron **Price** £2.99 **Supplier** Bug Byte, Liberty House, 222 Regent Street, London W1R 7DB.

A little miracle

This is the conversion ■ the popular arcade game, and makes a pleasant change from the current trend toward ever more exotic plots and complex riddle-solving. There's not much to the game, set against beautifully-drawn backdrops depicting sights from around the world (nothing whatever ■ do with the action taking place in the foreground), the game is simple and refreshingly old-fashioned - avoid the usual alien blobs, do your best ■ pick up the energy blobs and survive as long as possible while traversing the screen by the most score-producing route as possible.

The only thing missing is your laser cannon-zapping is not the name of this game; it's all down to reactions and will you need them! Your little figure must clear the screen of all the bombs. There aren't many of them ■ a screen, but they're not easy to get at. None of the screens is particularly exacting, and the bombs can be cleared in any order – but there is a best way to handle each screen, and it is this that makes the game so addictive.

May not have been well-received in general, but, although it hasn't the depth of some of the more recent ar-

cade adventures, it is one of those little miracles which get loaded in to the computer at seven o'clock on a Friday night – just after a long week's work, when the eyes and mind want nothing more than to hand over to the joystick for a couple of hours. Neat graphics, good colour, lots of plink-plonk sound, lots of high-scoring . . . great fun!

Tony Bridge

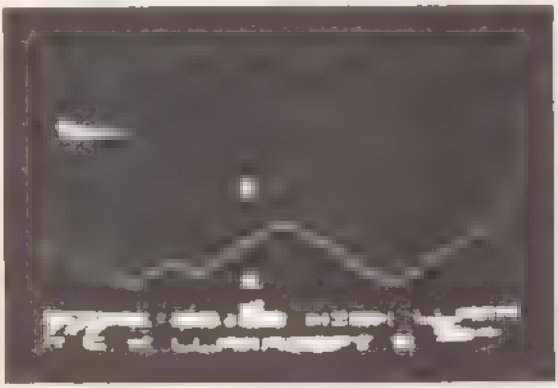
Program *Bombjack* **Micro** Amstrad CPCs **Price** £8.95 **Supplier** Elite Systems, Anchor House, Anchor Road, Walsall, West Midlands.

Fast, loud and awesome

In the fullness of time, when the chips are down and everyone stands up to be counted, and various ideas are run up the flagpole ■ see who salutes them, the Vic 20 will probably be decided to have been a GOOD THING. Archaic by today's standards, with its minute memory, limited screen display and lack of sprites or sophisticated sound, it was nonetheless the first affordable colour, sound, expandable home micro, and a decent little games machine.

Jeff Minter's *Viva Vic* collection, a compilation of the eight Llamasoft Vic games, underlines just how marvellous the Vic ■ must have appeared to owners of silent, monochrome ZX-81's and the like. Minter's unique head-banging programming style ensures that these games are FAST, LOUD and AWESOME – so don't throw that Vic out yet.

Andes Attack is a jolly Defender clone with the appropriate amount of zapping and exploding. *Traxx*, a huge success in its day, is one of those where you have to "paint" a screen by moving your tracer around a grid until all the squares are filled in, while avoiding progressively faster malevolent weeblies.



Gridrunner is ■ sort of "Space Centipede" where droids, pods, energy bolts and X/Y zappers gang up on you in an unsurpassed extravaganza of blasting. *Abductor* ■ an ingenious sort of non-scrolling Defender, in which you must defend humanoids from nasties using your plasma cannon. *Laserzone* requires a unique form ■ hand-eye coordination to control two lasers, on the x and y axes, firing diagonally if necessary to wipe out the baddies, while *Matrix* returns to the theme of *Gridrunner* with more skill levels and the addition of hallucinogenic cameloids.

The superbly-titled *Metagalactic Llamas Battle at the End of Time* is another one with a tricky control method, by which you must use a force shield to bounce your llama's energy-spit into the attacking spideroids.

Lastly, *Hell Gate*, possibly the fastest and most mid-blowing zap game ever, in which things move so fast that you have ■ just react without thinking ■ co-ordinate the fire of four gunships ■ wiping out hordes of mulies. Don't hit the goats!

Unmitigated fun, a wonderful history lesson (full notes are provided), and a bargain for any owners of Vics with 8K or 16K expansion. Get it instantly.

Chris Jenkins

Program *Viva Vic* **Micro** Vic 20 **Price** £6.50 **Supplier** Llamasoft, 49 Mount Pleasant, Tadley, Hants.

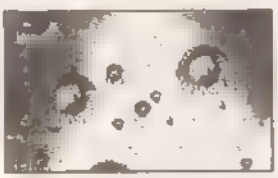
Electro-frazzle

Power up the 64, plug in your joystick and turn your brain off. You're about ■ encounter *Ollo*.

The scenario may sound a touch familiar: fly your spaceship through the waves of enemy defenders to reach the planet surface, operating on the premise that anything that moves should be zapped.

Flip the tape over, load side two, and you're confronted by a new scenario: fly over the planet surface knocking out the defending ships and dodging the surface gun emplacements. Here your strategy needs ■ be more sophisticated in that things that don't move should be zapped as well.

Graphically, *Ollo* is supremely adequate, the sound is suitably electro-frazzle, and the action is fast, though not quite furious.



■ you're the kind of gameplayer who can get locked into deadly high-score combat with yourself, *Ollo* will keep you happy for a while. The rest of you can rest assured that you're not missing one of life's sublime experiences if you ignore it.

Peter Worlock

Program *Ollo* **Micro** Commodore 64 **Price** £2.95 **Supplier** Bug-Byte, Liberty House, 222 Regent Street, London W1R 7DB

Crime prevention

The desk sergeant was pretty well at the end of his tether. It was a pity about the tether, but frankly if I hadn't tied him up he'd have been well away. The local Conservative Association was shouting the station down after I'd accidentally turned loose the Police Constable's Reserve (a fairly unreserved mob, by ■ accounts) on their leafy suburb, while the shopkeepers around the football ground had some queries about my decision to control a 30,000 crowd with one police dog handler.

"The trouble with you, superintendent, is that you're unreliable," said the sergeant. High praise this – my previous attempt at *The Force* had only netted me ■ rating of incompetent.

The Force is actually one of the most complicated strategy games around and has now been converted to the Spectrum from the Commodore. You play the role of police superintendent of Middletown, controlling four police stations, each of which is further subdivided into four geographical areas.

You have a fixed amount of resources, consisting of beat officers, cars, dogs and horses at your disposal, and you have to allocate these by area over three daily shifts – crime patterns vary depending on time of day – on a weekly basis. In addition you have have the aforementioned Police Constable's Reserve – which fixes crime fast but ruins your popularity.

Once you've sorted this little lot out, it's a case ■ sitting back, advancing the time clock one week and watching events unfold. You'll get a detailed picture ■ crimes you're currently observing, and reports of major heists throughout Middletown, followed by an appraisal of your performance.

Although the game can be entertaining once you've got to grips with it, I'm unsure about its addictive qualities, as the screen displays are so complex, and the time lag before anything actually happens so long that I suspect all but the most died in the wool strategy fan will lose interest.

But from a programming point of view *The Force* is nicely executed, and if you are a strategy hard-case it will probably provide you with weeks of engaging frustration.

John Lettice

Program *The Force* **Micro** Spectrum **Price** £8.95 **Supplier** Argus Press Software, Liberty House, 222 Regent Street, London W1R 7BD

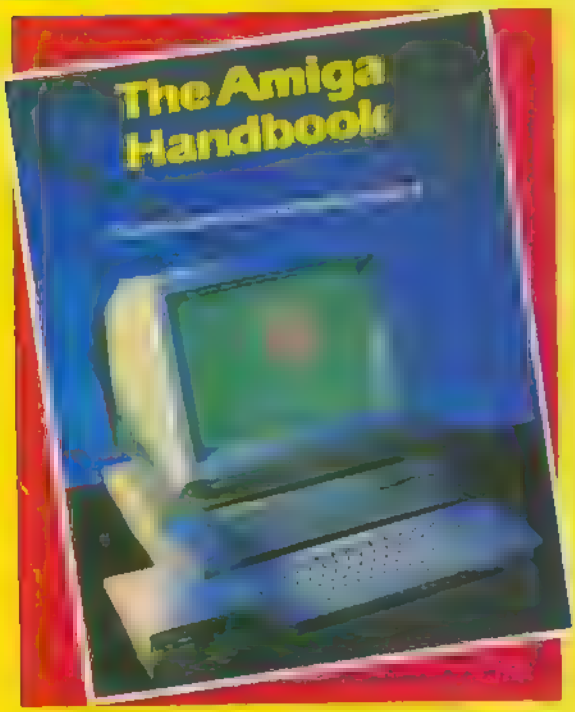
JOIN THE REVOLUTION — BUY YOUR INTRODUCTION TO THE FUTURE



The new Amiga represents a revolution in personal computers. This book is the authoritative introduction to that revolution.

The **Amiga Handbook** by David Lawrence and Mark England takes you behind the scenes to examine:

★ The custom-designed chips that allow the Amiga to outpace machines many times its price

★ The wide-ranging built-in libraries that control the Amiga's graphics, sounds, animation and speech

★ The 'Intuition' user interface that controls Amiga's windows and icons, and the more traditional text-based Command Line Interpreter

★ Programs in the powerful Amiga BASIC language to make the Amiga read a story, produce colourful graphs or simply print out a bill

★ The easy-to-read Workbench environment and how to make it work for you

★ The kind of applications programs you need to build a system on the Amiga and how to use them effectively

This is the first book for the Amiga. Buy the book and join the revolution

Fast monsters on the Amstrad

Tony Kendle makes a plea for tips for games on newer machines, and the Marsport solution takes shape

I can't remember the last time I ever wrote about being captivated by a QL arcade game, indeed if I ever was. It has taken a long time, far too long for Sinclair's sake, but the quality and frequency of QL programs is now ironically, quite respectable, sufficiently so to make the incredibly cheap offers in the High Street stores worth a second look.

The game that has caught my eye in particular is *3D Slime* which is like a cross between *Erbert* and *Marble Madness* but with a marvellously comical and cartoonlike piece of jumping slime as the main character. It not only looks good for the QL, but has just the right mix of addictiveness and challenge to make it a classic.

Even so, the QL is most attractive for some simple dedicated use such as Basic programming or the Psion suite. The only 68000 range machine that is really living up to its promised performance in this country is of course the Atari ST, and Rainbird software, pioneer of state-of-the-art programming, is promising some new arcade/simulations that will match the superb standard of releases such as the adventure *The Pawn*. More details soon.

In the meantime we are still waiting in vain for the first tips for ST games in the column.

For instance, *Brattacas* has been around for quite a time now and there must be lots to say – I would like to hear from any ST owners out there.

Infuriating bounder

It is impossible to avoid the question of games conversions these days. Almost everything that comes out is released for several machines over a very short time. This makes a lot of sense: one of advertising covers machines, it fits in well with the team design philosophy of many large companies – it is often easier to program a game than it is to come up with good ideas – and there is often only one set of independent reviews. I wouldn't like to say that companies deliberately send in just one version of a game for review, but attempts to persuade them that they should let us see *every* copy meet with very little enthusiasm.

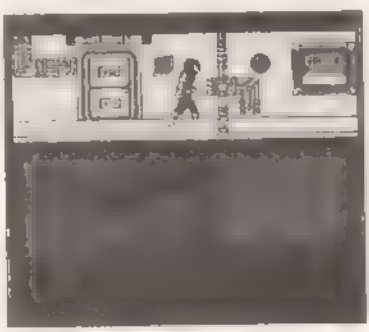
If you find a game that you have seen recommended which turns out to be rubbish on your machine, please write in and let me know.

Two companies that seem to go to great lengths to ensure that owners of all machines receive a quality product are Gremlin Graphics and Mikro-Gen. Both of these have recently sent through games that have become great favourites of mine.

Gremlin has lately had a lot of acclaim for the graphically excellent *Way of the Tiger*, but I actually prefer the infuriating and wickedly addictive *Bounder* which was deservedly popular on the Commodore and has lately appeared on Amstrad and Spectrum. Don't bother buying it if you don't have a joystick and let's have some pokes *please!*

Fast monsters

Mikro-Gen has a new game that, so far, is available on Amstrad only. Called *Equinox*, it's one of the few releases that makes Amstrad multicolour mode look intricate and fascinating, and which plays like a cross between a platform game and *Defender* – lots of satisfying zaps and explosions and some fast monsters together with just enough strategy to keep it interesting.



Marsport from Gargoyle Games

Mikro-Gen has provided some tips and after a decent interval we will print a selection of these.

Before we get on with more *Marsport* tips, can I just give a quick mention to a nice Fanzine-type mag, *High Score*, available at £1 per issue from Anthony Marshall,41 Loders Green, Eastfield, Scarborough, North Yorkshire, YO11 3LB.

The magazine is aimed at Spectrum owners but the tips and high scores may be of interest to others. If you do buy it, please don't plagiarise anything for this column.

Now then, in *Marsport* you should have the earmuffs from the safety room in Joly. Now get the empty tank from Alba and the oxygen from the chemists and make them into an air tank.

The next step is to get the calculator machine from level B and get the lift down to Gill. On Gill, to get through the danger room, you need to take the bomb and use it as a key – after this every time you pass through you must put each new bomb in the refuse.

To get past the next danger room you need the earmuffs to protect you from the sonic bomb. This will give you access to a lift to level C where you will find some steps. The danger room on this level is a vacuum and the air tank lets you survive. Go down to Farr and enter the gas room that contains the clue "The game is the key . . ." In case you haven't guessed, the calculator (adder) and steps combine to make snakes and ladders. It is on this level that the third key is M-central will be found.

Important clues

Getting through the games room will give you access to hate level at last (where all the computers, etc, are).

On this level you will find three key slots – two outside the door to M-Central and one in the control room. Put a key in each and you will have completed the first part of the game.

You will receive two important clues on this level – "I'm the sentry . . .", gives you the method to the solution of part two, ie, you have to solve five clues given by five viditex machines.

The answer to each leads you to combine two objects, many of which you have already used. The clue about the heralds knowing all that is alien is an important pointer to the value of certain items you will find.

When you leave Hale you will find that all previously restricted doors will now be open and you will have access to some more of the game. With the new objects that you find you will be able to open the remaining danger rooms.

The first one to solve is the virus room on Level C, where you need an antidote. To make this on the Amstrad version (I understand the syringe is not necessary on the Spectrum version), you need the insect from Gill (ant), the tea from the bar (ti) and the pointe from the Oratory (pointe is dot plus "e", ie, dote).

From the Amstrad — to the Atari

Tony Bridge looks at the first Quill'd adventure for the Atari, The Quest of Abraham Smee

The Quill, as Corner readers will be well aware, has become the standard adventure-writing utility on the Spectrum. It has engendered many great games – and, it has to be said, some awful ones too – so I'm always amazed that it does not seem to have done so well on other machines. Now that Gilsoft have released *The Quill* for the BBC, maybe we will see a new source of adventures' though the utility is not easy to use well, I urge any Beebers to investigate the program and try their hand.

A couple of weeks ago, I looked at *The Lost Phirious*, the first Quill'd adventure for the Amstrad and now, Laurie Power has sent me another first, his Atari *Quill'd* game, *The Quest of Abraham Smee*.

The title is rather evocative as to the story, there's not a lot of information. This is the first screen: "Sickness was upon you when you stumbled to this valley. As you thrash about in troubled sleep you hear the voice of the Wise. 'He no longer plays in the North so evil plays in the land. Go north, Abraham' As you wake, all memory fades" How you remember what was said to you by the Wise (what?) is not made clear, and this scene-setting is spectacularly unhelpful – but you awake in the attic of a house and it is here that the inevitable problems start.

Sudden death

For the most part, *Smee* is standard-issue *Quill*, with white text on blue paper and a rather attractive 'fade-up' to each screen. There is the obligatory 'sudden-death'; as in most *Quill'd* adventures, this takes the form of hunger or thirst, but Laurie has used a little more imagination in devising a band of black raiders who thunder in to the house and kill you unless you avoid them in the correct way. The natural inclination of most adventurers, I suspect, is to err on the side of caution: so, at the start of a quest, short forays into the opening locations are undertaken to pick up useful objects and generally get the lie of the land. That'll do no good in *Smee*! Yes, you'll find a way of avoiding the clutches of the Riders, but then you'll find yourself scuppered later, as they lock the door of the house behind them – you must get the key before they do! It's easily done, but I guarantee that you will die several times before finding the solution. You must leave the safety of the house and find a useful object before nipping back inside to escape the Riders.

Imaginative

In fact, though the problems are not on the whole difficult and largely of the 'build boat from wood, nails and hammer/examine everything for useful objects' variety they are managed throughout with flair and occasionally, a great deal of imagination. Desmond ('some legendary character') makes an hilarious appearance singing, not of gold this time but hey-nonny-no, and many of the descriptions are atmospheric giving just the right amount of information and the spur to get you hunting for the next location. It is small details like Desmond that add interest to any adventures, and *Quill'd* games in particular – in fact, it's the *Quill'd* variety above all others that requires the little touch of originality such as Laurie brings to *Smee*.

I'll forgive Laurie his sacriligious comments regarding Level 9 and their 'lack of feel and game logic' (are you playing the same games, Laurie?), and agree with his thought that puzzles should make sense within the world of the adventure. He is offering *Smee* at the price of just £2 (tape) or £3 (disc), which is the bargain of the year for novice players – Atari owners, send off right now! Write to Laurie Powers, 8 Hall Road, Rusholme, Manchester 14.

Now, from Quills to an adventure for the BBC machines. *Project Thesius* is the second in the Rick Hanson series from Robico. It's written by Robert and Mike O'Leary using Robert's Message Compression System, *Midge*. K has assigned a dangerous mission to you, Rick: middle name Danger. That's all that you're told, and the game starts with you on a desolate beach.

Location descriptions are long, consisting largely of exit descriptions, which certainly makes a refreshing change from "Exits: N,E". The problems to start with are not very difficult (soft sand in a cave exists solely for the adventurer to dig in!), but wrong moves tend to end with sudden, unannounced death, though the reasons for your demise make sense with hindsight. So you'll slowly progress through the first couple of dozen locations finding the traps until you become well and truly stuck at the first really swinish problem.

Good addition

This is the kind of adventure that I like, and the whole thing is helped along by a very fast display and a good vocabulary. Commands such as 'Get All' (still not recognised by the majority of programs) are possible, and though much of the game is run along Matchword lines (for example, to start with you are dripping wet and a towel is at hand: eventually you'll find the combination of 'DRY WITH TOWEL', but that's not glaringly obvious, though it *is* frustrating) I found it very addictive and compulsive. Although Robico's packaging is, as usual, rather austere and uninspiring (none of the usual waffle here!), I'd recommend *Project Thesius* as a good addition to the Beeber's adventure library.

The program will set you back £9.95 on tape (BBC B or Electron), £11.95 on disc (state 40 or 80 track) – although these prices come down to £8.46 and £10.46 respectively if you join Robico's Discount Club . . . Fairland Close, Llantrisant, Mid-Glamorgan, CF7 8QH.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair – help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember – the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

ADVENTURE HELPLINE

Bored of the Rings on Spectrum. How do I get past the black riders in the C5? Steven Ogilvie, 55 Morning Field Road, Aberdeen, Scotland.

Pettigrew's Diary on Electron. What is the password for the first part of the game? Peter Armstrong, 83 College Street, Cleethorpes, South Humberside.

The Hulk on Spectrum. I've protected myself from the ants, How do I get to Antman? Brett Norris, Rama, Martins Close, Keevil, Trowbridge, Wiltsire BA14 6NJ.

Castle of Terror on C64. How do you get out of the room where the treasure is kept? Mark Gidden, 3 Fallowfield, Orton Wistow, Peterborough, Cambs.

Lord of the Rings on Spectrum. What use does the green elf stone have? How do you use it? Mr J Nasir, 8 Fairfield Avenue, Hendon, London NW4 3TN

Sphinx Adventure on Electron. I can't find the mouse or the boat. Joseph McQuade, 2 Etterick Road, Blantyre, Glasgow G72 0QR.

Heroes of Karn on Amstrad. I can't get started at all, and would be glad of any help. C Taylor, 44 Heydale Road, Liverpool L18 5JQ.

Subsunk on Spectrum. How do you get the yoghurt from the fridge? Stephen Philip Chaney, 7 Plas Istwyn, Northville, Cwmbran, Gwent

Lord of the Rings on Spectrum. I can't get further than the forest of Lothlorien. Can't climb the tree. K Matthews, 66 Holbein Walk, Grange Park, Swindon Wiltshire, SN5 6DS.

Sphinx Adventure on electron. I can't get across the lake Jason Ross, Catalan, Southsea Avenue, Minster, Isle of Sheppey, Kent ME12 2NH.

Hitchhikers Guide to the Galaxy on Taiung Einstein. 1) How do I open the screening door? 2) How do I get the particle? 3) What do I do on the presidential speedboat? Philip Wheatley, Highfields, Trowell Moor, Trowell, Notts, NG9 3PQ (Tel: 0602 283610)

Gremlins on C16/Plus 4. How can I kill the gang of gremlins when attacked? Alan Leach, 35 Hadfield Crescent, Ashton-under-Lyne, Lancs OL6 8HP.

Spiderman on Spectrum. How do I get past the fan? How do I make the web? Each time I try it says I've got baby formula Brett Norris, Rama, Martins Close, Keevil, Trowbridge, Wiltshire BA14 6NJ.

Castle of Terror on C64. I cannot get out of the secret panel with the treasure J Bidduiph, 151 Brookside, Newtown, Carlisle, Cumbria CA2 7JX.

The Neverending Story on C64. Part 1 – I've collected everything and gone everywhere – what next? Clive Tomes, 19 Pre De Chenes, St John, Jersey, Channel Islands.

Crystal Frog on C64. I have fixed the Load bug, but I can't get out of the ventilation flue J E Barber, 138 Oak Tree Lane, Selly Oak, Birmingham B29 6HU

The Pawn on QL. How do I pass the massive boulder blocking the track in the foothills? John Bows, 1 St Leonards Court, Bledington, Oxford.

Murder at the Manor on Spectrum. How do I get out of the sand pitand keep the sheep inthe pen? Miss D Thompson, 96 Symonds Road, Preston PR2 3DJ.

Lord of the Rings part 1 on Spectrum. How do you manage to cross the last bridge without being caught by the black riders? Mr J Nasir, 8 Fairfield Avenue, Hendon, London NW4 3TN.

Twin Kindgom Valley on C64. How do you get the staff of gold from the witch in the east tower? Clive Tomes 19 Pre des Chenes, St John Jersey, JM.

Wazworks on Spectrum. How do you open the crack? What do you print next? Ellyn Prys Roberts, Tan-y-parc, The Green, Denbigh, Clwyd, N Wales.

EDGE, 31 SOHO SQUARE, LONDON W1V 5DG

CHARACTER EXPANSION

by Brian Cadge

An advantage of the Amstrad's bit mapped display is that text can be mixed with graphics in any of the three display modes. However, it would often be useful to be able to alter the size of the text characters displayed, for use in title screens, menus, and other displays. This is the facility that this program gives you, via two new commands.

Type in, save and run the Basic Loader program, taking care with the Data statements. If you haven't made any mistakes entering the code you will get a message informing you that the new commands have successfully been loaded.

Now type in the short demonstration program, to get an idea of what the commands can do. This demo program simply displays the letters 'PCW' in all possible sizes in all three modes.

The two new RSX commands are called CSIZE and DISPLAY, the syntax of them is as follows:

|CSIZE,xmag,ymag

Where *xmag* is the horizontal magnification factor, and *ymag* is the vertical magnification factor. So to get triple height, double width characters you would type *|CSIZE,2,3*. Note the '|' before the command name, this tells Basic that the command is an external RSX command ('|' is obtained using Shift @).

Also note that there is a comma immediately after the command name. *Xmag* and *ymag* must be in the range 1 to 7. Obviously, using *CSIZE,1,1* would give characters of the normal size.

Once you have set the size of characters, a string is printed using the DISPLAY command. So if *X$* is a string containing the message to be printed, the syntax of the command is:

|DISPLAY,@X$

The '@' is necessary before the string variable name to pass the string descriptor (containing the length and start address of the string) to the machine code routine. The string is displayed from the current cursor position, so you can use the normal *LOCATE* command to position the text. The characters are printed with their top left hand corners at the cursor position. Take care not to cause the screen to scroll within a *|DISPLAY* command, ie. do not try to print the expanded characters too low down the screen, otherwise each section of the expanded character will be printed on a separate line.

There are no restriction on the use of the new commands, they can operate in all modes, and the characters in the string can be user-defined if you wish – using the normal *SYMBOL* command. The character size set by *|CSIZE* is with respect to the normal character size for the current screen mode. So *CSIZE2,1* will give mode 1 size characters in mode 2, and mode 0 size characters in mode 1. The characters are displayed in the current pen and paper colours. One point to note is that the program uses character number 255 – *chr$(255)* – internally, so this must always be a user-definable code, codes 0-254 can be Rom based. Also there is no point in trying to use *CHR$(255)* in your own programs as the routine redefines it to display the expanded characters.

The assembly language listing is included to show how the program actually operates, and this is fully commented. The main routine is called *PRTCH*, this prints an expanded character at the current cursor position. The routine first copies the matrix for the required character from Rom or Ram into its own workspace, next it expands it vertically by the current value of *MULTY* (set by *CSIZE*). Finally, it expands each byte horizontally and defines *chr$(255)* as part of the expanded character – this is then printed using the normal Rom print routine. This process of defining *chr$(255)* and printing it goes on until the whole of an expanded character has been built up and printed.

Once a character has been printed, the cursor position is updated to be ready for the next character. So successive *|DISPLAY* commands, without using *LOCATE* between them will cause each string to be printed one after another. Note that control codes cannot be used within a *DISPLAY* string.

The *CSIZE* routine forces the *xmag* and *ymag* parameters to lie in the range 0-7 by an *AND 7* command, and then ignores the result if it is zero. Bigger sizes could have been used with only a little more memory, but characters seven times their normal size should be big enough for anyone!

Readers' survey

If you missed last week's Reader's Survey, well, here's a second chance to tell us what you think of us, and help War on Want at the same time.

You can help us by filling in the survey printed below, and for every completed questionnaire we receive, we'll donate 10 pence to WOW. The money will go to its general fund which goes to help fight poverty in the Third World, just as does money spent on WOW's compilation tape for the Spectrum.

Please note that the survey runs over TWO pages. Once you've removed our special pull-out supplement, you'll find that the Survey can also be pulled out, without damaging your copy of the magazine.
Send your completed survey off to Readers' Survey, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP, to reach us by Monday, June 16. We will publish the results in a future issue of the magazine.

1 Which of the following computers do you own?

Acorn BBC	☐	Acorn Electron	☐
Amstrad 464/664/6128	☐	Amstrad PCW 8256/ 8512	☐
Atari ST	☐	Atari 400/800	☐

IV
THE WORD IS OUT – SPECTRUM W/P

VI
AMSTRAD'S SINCLAIR TAKEOVER PLANS

X
GAMES FOR THE 128K SPECTRUM – WORTH IT?

XIV
BOBBY BEARING – THE EDGE'S LATEST

Whatever the fate of the Sinclair brand name under the Amstrad administration, the Spectrum will probably continue to be the country's most popular micro for some time to come. There's no sign of a let-up in the stream of innovative new products in both the games and the utility line, and the dedication of Spectrum users is legendary. With the 128K machine and the rumoured Super-Spectrum, excitement is still high.

This week we'll look at some stunning word-processors, the current crop of Spectrum 128 games, the impressive Bobby Bearing from The Edge, and the latest news from the world of the QL (yes, it's still alive and kicking!)

Together with a history of the Spectrum and a look at the latest video technology it's just a taste of how the Sinclair micros continue to provide fun and excitement for every owner. ◀

Sinclair Show surprises

The May Microfair was a rum do, notable mainly for a general air of uncertainty and an almost total lack of new products for the Spectrum. Instead, we were swamped with new releases for the QL, a system which it seems unlikely will continue to be produced unless by some miracle CST manages to save it.

As reported last week, the big news for QL users is the CST Thor, an upgrade of the existing machine which will eventually become an entirely new system.

Sandy's floppy disk drive

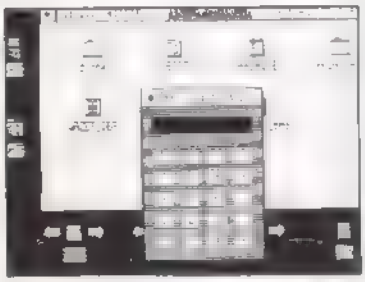
The prototype Thor is a repackage of the company's existing add-ons, fitted into a single case with a detachable IBM-AT-style keyboard. The new system, then, includes an enhanced QDOS, 640K RAM, single or dual 720K 3.5 floppy disk drives, and a 20 Mb Winchester option. The Winchester QDISC costs around £1,000, although CST are anticipating a price cut.

CST hopes to obtain QL's so that complete systems can be sold, rather than just offering a Thor upgrade. The final system is hoped to include a new 68020 processor, 1 Mb RAM, a 20 Mb floppy disk, the XCHANGE package, upgraded QDOS and casing at around £1800. CST plans a September launch.

Remaining with QL hardware, Farmintel showed the Sandy range of add-ons, including the 3.5 floppy disk drive, RAM card with through connector, twin expansion unit and Super Board with disk driver, parallel printer port, and superbasic extensions. Car Electronics and the SuperToolkit QL, a 16K ROM module which plugs into the expansion slot, and provides a full screen editor, default directories, job control, resident programs, file handling, extended networking, assignable keystrings and many more features.

Eidersoft's ICE program, a fully icon based desktop manager and front end for QDOS, comes on an EPROM cartridge and uses "next to no RAM". ICE is designed to be compatible with any Superbasic program and most commercial software, can be used with joysticks, keyboard, or a mouse, and offers multitasking, a clock, and calendar features. Costing £49.95, ICE is one of a series of utility packages and games for the QL from Eidersoft.

Prospero Software showed a series of 68000-based lanaguage packages, including Pro Pascal, Pro Fortran and the Prospect graphics subroutine library. On the games front, MOA showed a preview of 2092, a complex Moon Buggy variant for the QL. Although the preview looked pretty flickery, the finished version will be available soon and we'll be able to give it a fuller review.



Eidersoft's ICE for the QL

CAP software showed the Designer QL package, which includes a full screen editor with text facilities, additional text styles, and a character generator, while Datalink's CAD-PAK is a more technically-minded program.

As for the Spectrum, most of the new releases seemed to be concerned with overcoming the limitations of the tape

OUT OF THIS WORLD!

SAGA SYSTEMS' HARDWARE

If you want the best for your Spectrum, assuming it advances with technology the Saga Systems' collection of keyboards and peripherals is essential. And they are all compatible with the 48K, + and 128K Spectrum.

loading system. TR's Beta-Plus disk interface has a new Magic Button facility, which enables any tape-based program to be transferred to disk with a single press. The interface also features auto boot, random and sequential access file handling, and auto checking. The interface is £109, and the Beta-Plus single-sided 40-track disc drive £229.

AT & Y's Spec-Mate claims to be able to transfer any tape program to microdrive, Beta or Opus disk. An expansion slot is provided on the back of the unit, so it can be left in place at all times, and it also offers turbo-tape loading facilities.

The Mirage Microdriver offers transfer of any tape-based program to microdrive, with optional saving of screen display, screen dumping, freeze facility and through connector.

Saga Systems gave a demonstration of their wide range of keyboards and the First Word program, reviewed elsewhere in this supplement, while Opus showed the

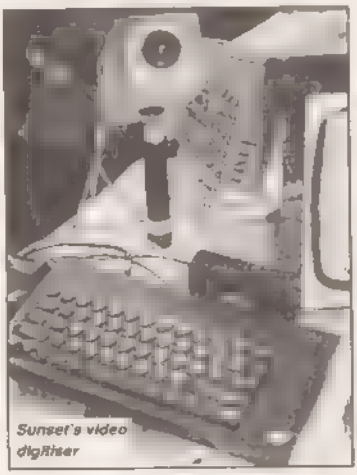
Discovery disk system from OPUS

Discovery disk system featuring the 128K version, which allows you to change operating modes at will, set up a random access filing system, use the 128's extra memory as a RAM disk, and retains the features of the original Discovery 1 including the peripheral through-connector parallel printer port, Kempston joystick interface, video monitor port and built-in screen designs. ◀

Video digitising

By far the most interesting new products at the Show were the two video digitisers, from Data Skip and Sunset.

The principle of video digitising isn't new, but the technology has only recently been adapted for home computers. The DataSkip, a Dutch product retailing at £69, is claimed to be able to digitise a video picture in 0.27 seconds, while the



Sunset's video digitiser

Sunset device seems to have better handling facilities.

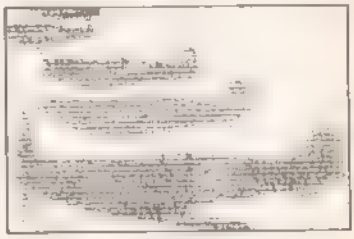
The Sunset video digitiser is housed in a Cheetah-style case, plugging into the Spectrum's user port. It can be connected via its standard video socket to any source such as a video camera (either the mono surveillance type or sophisticated home movie models) or the out put from any home video machine. The digitiser will then take any still picture and transfer it to the Spectrum's memory, storing it in the form of a 256 x 1992 pixel image at 16 resolution levels.

Once you have the image on the screen, you can manipulate it by changing the contrast levels, saving it to cassette or microdrive for later use, load it into art software packages for further manipulation, or print it out.

The resolution of the Sunset digitiser is much higher than the Spectrum screen display can actually cope with. It's also larger than the Spectrum's screen display, so you can move the picture around the screen to crop it as you desire.

The menu-driven software allows you to control the input level and display type, though the digitised pictures are limited to black, white and shades of grey.

The software can be transferred to microdrive, and Sunset are working on various upgrades and extra options. The package comes complete with all necessary leads and adaptors, and will soon be available for the Amstrad, at around the same cost of £126.50. We'll review the



Digitiser in more depth at a later date.

Microfair Show organiser Mike Johnston said the Fairs would continue so long as there was support from the public and third party suppliers. On the evidence of this Show, there's plenty of enthusiasm, but the supply of new products for the Spectrum is slowing down, and the QL's future must remain in doubt until Amstrad decide whether it is worth continuing to support it, or arrange to put its fate in other hands. ◀

The word was Spectrum

CHRIS JENKINS LOOKS AT FIRST WORD AND TASWORD 3, AND PREVIEWS THE WRITER, THE MOST POWERFUL SPECTRUM WORD PROCESSOR YET

Building up an adequate word processing system on the Spectrum requires several tricky decisions. Firstly, you have to decide whether to replace the keyboard; then, whether to rely on tape, or go for microdrive or disk drive; next, which printer and interface to use; and, perhaps lastly, which software.

That last decision is now much easier, since there are now at least three word processing packages which offer a wide range of professional facilities.

The Last Word from Saga Systems is designed to be easy to use without having to wade through the 30-page manual. All sixty commands are available in an on-screen summary which shows the entry key combination required for each command.

I found it difficult to get used to the fact that the main control keys are Symbol Shift and Extend. This makes the Last Word package better suited for the Spectrum + or 128 than the squishy-key Spectrum, but then, how many users would be able to cope with the original keyboard anyway?

On loading – the program can be transferred to microdrive, wafadrive, and a variety of disk drives including Beta, Opus and Gordon – the main display shows a file window filling most of the screen, and a command line above it. The command line contains indicators for line and column number, tabs, video status, wrap, justify, overwrite, upper case lock and so on.

One of the best features of The Last Word is the clarity of the redefined character sets. Admittedly, I was using the system with a reasonably good monitor, and so had no difficulty with any of the 40, 48, 60 or 80-column displays. Using The Last Word with a TV, the 80-column display will probably only be of use for formatting the text; the letters tend to merge into each other too much for the text to be actually legible.

Once you have set the character size you want to work with, the program will "wrap-around" text as it reaches the edge of the screen. There are several commands which make it easy to reform paragraphs, either at different text sizes or with new margins or spacing.

Text editing is done with the cursor keys, and you can move through a document either a letter, a word, or a sentence at a time, using the Extend mode and symbol shift. Saving text can be done in ways. You can either define a start line and end line, or save the whole document, to either tape or microdrive. On reloading you can merge files together consecutively, or insert new material if you wish. If loading from tape, all the filenames present will be shown as they are found.

All the facilities of the most powerful word processors seem to be here; shifting blocks of text, search and replace for specific words or phrases, left or right justification and centering, word count (the maximum is about 4000 words), a calculator, a clock, variable line spacing, variable copy number, and powerful printer control routines.

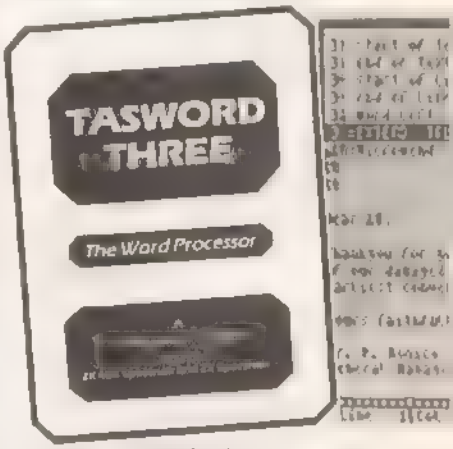
The Last Word supports 24 printer control tokens, which should allow you to use any common printer, although the basic set-up assumes a ZX-LPRINT III interface and Epson RX-80 if you are not using a Sinclair printer. Kempston, Morex, Tasprint and other interfaces are also supported, and since it is possible to exit to Basic from the main program, it should be possible to cope with other devices too.

Overall, while The Last Word is a very comprehensive and powerful program, I think its best feature is the screen design. Everything looks very professional, and is presented in a clear and user-friendly manner – essential in a program which is likely to become a firm favourite with Spectrum users. ◀

Program The Last Word
Supplier Saga Systems
Price £13.95
Format Cassette

Tasword Three has a lot to live up to, since its predecessors have established themselves as the best word-processing packages available for the Spectrum. The greatest immediate difference is that T3 is available only on microdrive.

The most controversial feature of T3 is the screen display. Some word processors, like The Last Word, split a line over two screen lines if the number of characters exceeds the set column width. With T3, the screen scrolls across to keep your text in



view as you type it. The obvious disadvantage is that you cannot see all of the text all of the time.

The manual – a beautifully-printed 64-page epic – is very full and clear, and kicks off by explaining the peculiar "reversed E" symbol used on the command menu. This indicates Extended mode, of course, and is used in conjunction with single keypresses to access most of the operational modes.

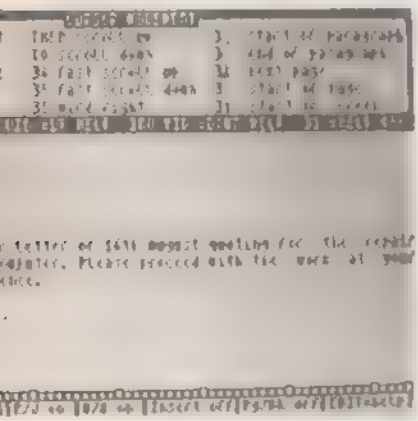
Maximum line length in Tasword 3 is 128 characters, while the display width is normally 64. A single text file can be up to 17000 characters long, while the central text window can show either 15 or 22 lines. There's an auto-repeat facility on all keys. There are two help pages, one dealing with text commands and one with I/O. These are really only summaries of the facilities available – much better explanations are given in the manual.

Just a list of some of the major features of Tasword 3 will give you some idea of how advanced it is. Word-wrapping at the end of each line can be overridden, as can the automatic justification. Right-justified text can be changed to left-justified and vice-versa. Files can be merged simply by loading new ones after existing text. The command cursor can be moved to the start or end of

T·H·E
LAST
WORD
for the
48k ZX Spectrum/plus
micro-computer
SINCLAIR USER
CLASSIC
Saga Systems Limited

the file, or the start or end of a line. There are slow and fast text scrolls, page skip, delete and undelete, (for the most recent line deleted), auto-insert to rejustify the current paragraph while new text is being inserted, search and replace, block move, printer control characters, variable window size, variable form length to adjust for different paper sizes, variable copy number, variable spacing, page numbering, and so on.

Tasword 3 is, up to this point, a powerful but fairly standard word processor. However, there are a number of clever features which are more advanced than some packages designed for much more expensive systems; for instance a word buffer which makes it practically impossible to "out-type" the program, Data Merge Filing for producing multiple copies of files with varying headings, say, conditional printing (by which information held in a data merge file can control whether a



document is printed or not), a tutorial program on the microdrive, and a wide range of customisation options for making personalised back-ups.

Tasprint and Tasword Two files can be used, providing the correct conversion procedure given in the T3 manual is followed.

Unless the inability to transfer Tasword to a disk system puts you off, the facilities and reliability of the product should make it an attractive purchase. I didn't find it as user-friendly as Last Word, but this is perhaps some reflection of the number of facilities available, and would probably be overcome with familiarity.◀

Program Tasword 3
Supplier Tasman Software
Price £16.50
Format Microdrive

The much-anticipated **Writer** program is an attempt to out-perform every word-processing package available for home computers, and on the evidence of my acquaintance with it so far, it in fact beats many professional packages.

Most of the standard text handling facilities are similar to Tasword 3 or Last Word. The Writer loads in black and white, but you can customise the screen colours to suit your taste. The status line above the text window gives you information on file name, line and column number, insert/delete/overwrite modes, caps lock on/off, and so on. Pressing the Edit key accesses the main menu bar, which includes FILE, EDIT, TEXT, SEARCH, FORMAT and HELP. The HELP menus are only available on the microdrive version of the program.

Using GRAPH mode you can use a number of accented characters including the German double-s, C-cedilla, grave and acute e, and so on. Wordwrap can be enabled or disabled, there's a full search-and-replace facility, page numbering (Arabic or Roman!), headers and footers, printer control characters for underlining, a wide range of printer driver options, compatibility with Tasword 2 and Quill files, and so on and so on. However, the normal word processor facilities are just the start of what The Writer can do. Firstly, it can be customised or operate either with a joystick or with a Kempston mouse. The pull-down menu system is comparable to that of the Apple Macintosh, so using it with a mouse is the natural move. Using the Mouse eliminates much of the tedium of selecting the correct control keys, which is the major bug-bear of some word-processors. You can still use key commands even if you have the mouse in operation.

Secondly, The Writer takes into account the fact that some printers can cope with over 80 column, especially when using condensed modes. The Writer can display up to 127 columns of text, with a scrolling display.

I have not used any other program which has true printer spooling. You can actually write one document while another is printing out – and on the 128K version, it's possible to hold up to five documents in memory simultaneously.

The Writer is Wordstar file compatible, so you can take your files homes from the IBM PC in work, and load them into the humble Spectrum, via the RS-232 on Interface 1.

There are also not one but three forms of mail merge; a WRITE/INCLUDE function which will pull any microdrive file into your document, a more sophisticated mail merge using some simple Basic programming to merge lists of names and addresses into the text, and a third option using the forthcoming Filer program.

Perhaps most impressive is the Print Merge facility, which has some capabilities which I found quite astounding. It allows you to merge texts at the time of printing, and set up variables using GET and PUT commands, which can be updated at the time of printing. Conditional printing makes the program print a certain document, or part of a document, only if a condition set by a variable is satisfied. For instance, you could set up a letter reminding a number of clients about overdue debts, and two alternative final paragraphs, such that if the debt is over under £500 the letter reads "... and we would appreciate payment as soon as possible", while if the debt is over £500 it reads "... and the boys will be around to break your legs tomorrow."

Numeric variables can also be handled in the program, to such a level of complexity that you could, for instance, from a single given amount print the original, final price including VAT, and the VAT charge separately.

Needless to say, SofTechnics has made sure that any printer can be supported. This isn't just a vague promise – apparently *any* printer which can be attached to the Spectrum can be supported by The Writer, using user definable printer definition files. Some of the commonly-used interfaces are ready-defined (Kempston, ZX, etc), but the customising feature allows you to tackle any RS-232 or Centronics printer.

What else do you want? Well, apart from the microdrive transfer facility on the cassette, there ae Opus, Beta, and other disk versions coming. It's also possible to integrate files from the Artist graphics program, and the forthcoming Filer, Database and Spredsheet programs. Eventually SofTechnics hopes to offer a complete integrated system for business and uses such as page make-up for desk-top publishing.

This has necessarily only been an overview of some of the facilities of The Writer. There are so many facilities available that it would take a book to thoroughly explore all of them. One thing is certain, though; with the Tasword2 compatibility and the promise of forthcoming compatible software releases, The Writer presents Spectrum users with yet another worthy contender in the wordprocessing stakes.◀

JUST WHERE DOES THE AMSTRAD TAKEOVER LEAVE OWNERS AND POTENTIAL PURCHASERS OF SINCLAIR MICROS? CHRISTINA ERSKINE FINDS OUT

Sinclair's future shock

Sinclair users and software companies alike have been left in a quandary by Alan Sugar's announcement of April 3, that he had picked up the rights to Sinclair's computers for a mere £5 million.

Confusion and speculation have surrounded the deal and what it means for the Spectrum, software support, the repair service, and Sinclair's idiosyncratic peripherals ever since, and no-one seems particularly keen to clarify things.

Bunker

The real losers, so far, appear to be those with faulty Spectrums, especially those who sent them in for repair shortly before the deal was announced. Amstrad says it's not its problem, while Sinclair Research has retreated to its bunker at Milton Hall, near Cambridge, although it won't be there much longer: the building is up for sale.

The repairs issue is the one causing most confusion among Spectrum owners. The truth is that Spectrums sent in for repair before the deal and not yet returned really aren't Amstrad's problem. Amstrad did not buy Sinclair, lock, stock and barrel. It bought rights to the Sinclair name, rights to manufacture its computers, and the existing stock.

The answer then is to contact Sinclair Reseach, or SRL, as it is now known, at Milton Hall, Milton, Cambridge CB4 4AE (0223 862661).Repairs are still its responsibility.

As for those whose Spectrums go wrong now, the message is clear. Don't send them to Amstrad, which is currently selling Spectrum stocks overseas, but take them back to the retailer.

And what of those who had been thinking of buying a Spectrum? Should they do so now, or wait until Amstrad's intended enhanced version appears?

Here it is really a question of your own patience. All Amstrad has said is that it will bring out a Spectrum micro, "Son of Spectrum", as Alan Sugar, Amstrad's chairman termed it, for this Christmas, with a tape deck and for around £140, and that it will be a no-compromise entertainment machine. That was at the beginning of April, and there has been no official word since of any confirmation of this. So, if you're put off by the Spectrum's squidgy keyboard, or lack of joystick port, don't bank on Amstrad rectifying these. It hasn't said it will, however much it may seem a sensible course to take.

Cartridges

Recent speculation has suggested pushing the memory up to 256K Ram, and a facility to use Astron credit-card style cartridges. It remains to be seen whether such is indeed the case. There have also been reports that Amstrad may produce the comparable 'super Spectrum', codenamed Loki, which was being developed at Sinclair before the deal went through. The specification of Loki allowed for superior graphics and gamesplay, but it is not clear what stage of development the machine had reached, nor whether Amstrad will press ahead with it.

On the Spectrum peripherals side, many Microdrive users are worried about continued support – and are wondering if they should junk the whole Microdrive idea and go back to cassette.

This again is up to SRL (Sinclair). However, the news for microdrive cartridges may be gloomy. Any new QL now looks likely to use floppy discs rather than microdrives (see Popular Computing Weekly, News Desk, May 15). Continued supply will probably depend on continued demand. Again, contact SRL.

Spectrum 128 owners will have noticed that there is not much in the way of specific software to convince them it was worth shelling out for the new machine. Many of the software companies have postponed plans to bring out 128 versions of titles – or new releases especially for the 128 – until they know how long a life these programs will have under the Amstrad regime.

Exceptions

For 128-specific titles that are out, see the survey elsewhere in this supplement. Unfortunately, you cannot expect much more 128-only products until Amstrad's plans become clearer. Rest assured that the vast majority of Spectrum Plus programs will run on the 128.

The salient exceptions appear to be Elite (Firebird – compatible version in development), Fairlight (The Edge), Impossible Mission (US Gold), Laser Basic, Laser Compiler (Ocean IQ), Macadam Bumper (PSS), They Sold a Million (Hit Squad), Tomahawk (Digital Integration) and World Series Baseball (Imagine).

Only time will tell whether the popularity of the Spectrum can survive Amstrad's marketing it as an entertainment machine.◀

THE WRITER

"The Best"

When it came to reviewing the best in wordprocessors for the Spectrum, Your Sinclair (Jan. 1986) said "I have no doubt that 'The Writer' will take over as the best Speccy wordprocessor."

Praise indeed. But praise we think is warranted for what one industry pundit described as "Probably the best wordprocessor I've seen for any Z80 based micro."

Just look at these professional features: up to 127 column screen display; 'Wordstar' compatible; Tasword II compatible; true printer spooling; user definable printer definition files (works with virtually any printer which can be interfaced to a Spectrum); pull-down menus; extensive 'help' files on non-tape versions; mail-merge (works with 'The Database' – forthcoming); print-merge; enables the definition of variables and numeric expressions in text; 48K and 128K Spectrum versions; Mouse/Joystick pointer options coming.

'The Writer' – "Simply, the best wordprocessor for the Sinclair Spectrum."

STOP PRESS: now Kempston Mouse compatible.

Softechnics, 12-13 Henrietta Street, Covent Garden, London WC2E 8LH.
Tel: 01-240 1422 7877. Tlx:892379.

Write for details of "The Database" and "The Spreadsheet" coming soon.

'The Writer and Artist II are available on most formats – disk, Microdrive and tape).

THE ARTIST II

COMING SOON

"Better than the Best"

When we launched 'The Artist' in 1985 it was reviewed as the most amazing graphics package to have appeared for the Spectrum. Indeed, it became one of those very few 'utilities' to actually get into the Gallup Chart…

But now a new graphics package is all set to knock 'The Artist' off its Number One spot – 'The Artist II.'

Artist II has been designed to be the 'best-bar-none' with features including: Icons and Pull-Down Windows; Mouse Control Options (works with four different kinds of mice); 48K and 128K Spectrum versions; same unbeaten line up of graphics features – but now with the addition of elastic-lines, elastic-circles, elastic-ellipses and elastic boxes. Artist II now supports a full range of printers and enables 'dumps' in a variety of sizes. And yes, like Artist I, Artist II is still the only graphics package of its kind with a fully flexible 'cut & paste' facility for any shape of graphics.

PAGE-MAKE-UP: Artist II will also allow 'The Writer' files to be merged in and enable you to do true 'page make-up' as on much more expensive micros. Ideal for club/school magazines, broad sheets, etc, etc.

'The Artist II' – "It's bettered the best."

NEW!

M/DRIVE DOCTOR (Spectrum 48K/+/128K)

Extends BASIC to provide extra disk-like commands. *Rename facility *Sector restorer *Full catalogue *MEGAFORMAT (208-220K) *Cartridge clone (2 drives) *Merge ANY program *Default drives and wildcards *File finder *Printer output *Special commands for advanced users and much more. Compatible with all Interface One ROM types. Included is a full sector editor program for on screen alteration of data.

*"... this program is an excellent buy ... useful to anyone who uses microdrives seriously ... Highly recommended" (Simon Goodwin – Author QL SUPERCHARGE).

*"excellent utility ..." (S. Crow – Author STARQUAKE)

AVAILABLE MAIL ORDER ONLY. SUPPLIED ON CARTRIDGE COMPLETE WITH A 2500 WORD USER MANUAL FOR £7.50 inc P & P. (Price £8.50 inclusive outside U.K.)

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

Report with detailed instruction booklet

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below)
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K) Commodore 64, VIC 20 (+ 16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

All Programs Tapes Available on 5¼" 40 Track Amstrad PCW (with 3.2M file in 'A' drive)

FIXGEN 86/6

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1988/9. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER V3
THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It compares most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database – never goes out of date.

AVAILABLE FOR Spectrum (48K) Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) **(includes First AND National Post versions.)**

CHANNEL FOUR TELEVISION

IS BIGGER ALWAYS BETTER?

WHAT CAN YOU DO WITH 128K THAT YOU CAN'T DO WITH 48K? JOHN MINSON LOOKS AT 128 GAMES

Back in the old days, when Sinclair was synonymous with Sir Clive and not Sugar, the Spectrum 128 launch was heralded with a hall full of software houses, seduced into producing games for the expanded (and more importantly, audible) machine. Still, the churls of the computer press said it was too little, too late and ■ too great a cost.

Now the marketing strategy of Amstrad is set to change all that. The spectrum Plus is being off-loaded like aerials from a car boot and the 128 has fallen to the price we said it should have been all along. In fact, with a probable revamping in time for Christmas (built-in tape recorder and almost certainly a joystick socket), it's about to become the machine we wanted all along!

This is sure to create renewed interest from the software houses, most of whom would tell you – off the record naturally – that even at the launch they didn't intend to follow up their initial titles until they'd seen how the machine was selling.

Bundling

Ocean were the lucky people to get their product bundled with the micro, so there's no avoiding *Daley Thompson's Super Test 128* or *The Never Ending Story*. These demonstrate the two most common traits of 128 conversions – improved sound and the avoidance of multi-loads! Both are highly proficient, have nice music to make use of the new sound chip and provide an introduction to keyboard punishing arcade games (was this a Sinclair ploy to write off their new machines quickly?) and accessible adventuring for the newcomer to computing. But for the already hardened hacker they hold few thrills.

Odin and related label Thor have a trio of games in *Nodes of Yesod*, *Arc of Yesod* and *Robin of the Wood*. The first two are ■ the arcade adventure mode though that's no bad thing■ when they're as well done as this. 128 means better music and added amusing touches, like the mole belching once it's eaten its way through the moon. The main quibble is that *Arc* is really just more of the same of *Nodes*. *Robin* is a *Sabre Wulfe* variation with some lovely medieval music. Still, would you really want to buy them if you'd already got the 48K versions?

Mikro-Gen's *Three Weeks in Paradise* and Gargoyle's *Sweevo's Whirled* indicate another possibility for programmers with all that extra RAM to use. Wally Week has a whole new area of Can Nibble Island to explore, though unless you are careful you may well miss the top secret sea-bed missile base. This was generally reckoned ■ be the best of the Wally games and certainly I'd choose the expanded version any time.

The same goes for *Sweevo*, a classic of 3D madness, which gains an extra 80K of lunacy with new levels for the fruit filled world of wumpuses and geese. Blow me if there aren't noses sprouting from the floor now. Once again, the expansion of a quality product has resulted in a tempting purchase.

Improvements

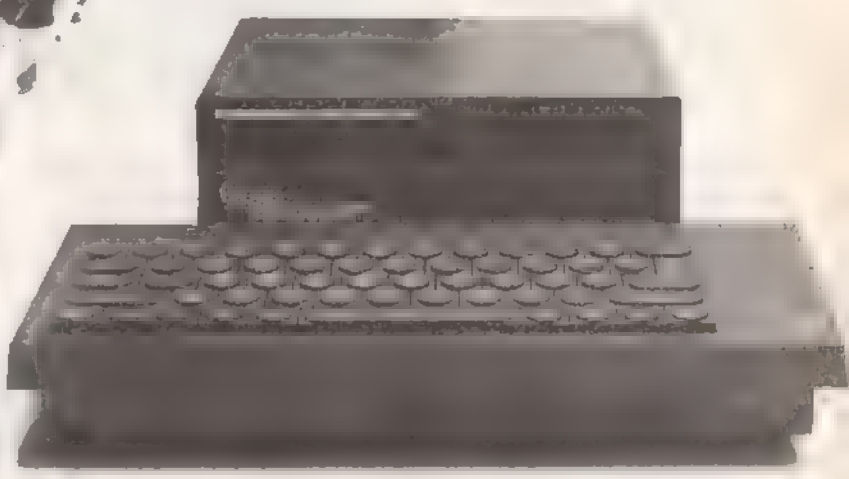
The course of improving on program size has also been followed by Martech with *Samantha Fox Strip Poker* (and no, that doesn't mean a bigger Sam, perish the thought!). I've not actually seen this but apparently ■ boasts yet more grainy pictures of famed intellectual displaying her most outstanding features. If you merely want to ■ze at these protuberances I'd advise purchasing a copy ■ *The Scum*. However if you want a decent game ■ seven card poker the program provides it – on the Sam-less side which is presumably the same as the 48K version.

One game that has undeniably gained from being reworked is Domark's gory Roman ramble, *Gladiator*. In its original version ■ was decidedly a case of nice graphics, shame about the game play. Now not only have the backgrounds been added to and the combatants generally tarted up but the original clumsy control system has been jetisonned. This means that you now have a chance of stabbing your opponent in the kidneys, chopping at his legs and stabbing him through the adam's apple. All good clean fun for an ambitious slave!

Of more interest is *The Planets*, from Martech, which calls for several loads ■ its 48K version.

DISCOVERY CRUSHES THE COMPETITION

NOW ONLY £99.95 + VAT



At an amazing **£99.95** Discovery deals a crushing blow to every Spectrum disc drive system on the market. Now it's not just the best equipped disc drive you can buy, it's also the cheapest.

Choose Discovery and you'll find a system packed with brilliant features:

- 3½" 250 K DISC DRIVE
- DOUBLE DENSITY DISC INTERFACE
- JOYSTICK INTERFACE
- PRINTER INTERFACE
- VIDEO MONITOR INTERFACE
- RAM DISC FACILITY
- BUILT-IN POWER SUPPLY FOR DISCOVERY AND SPECTRUM
- SIMPLE ONE-POINT CONNECTION

All this for only **£99.95**. And now there's even more!

- FREE TRANS-EXPRESS UTILITY PROGRAM — TRANSFERS YOUR FAVOURITE TAPE SOFTWARE TO DISC
- CHOICE OF DISCOVERY FOR THE 48K OR 128K SPECTRUM
- FULL 12 MONTH WARRANTY
- COMPREHENSIVE USER MANUAL
- OPUS DELIVERY PLEDGE

The Opus package is unbeatable value. We guarantee you delivery within 72-hours of receiving your order and it's absolutely **FREE**.

To order your Discovery call the Opus Sales Hotline now on **0737 65080** or post the coupon. Dealer and Education enquiries welcomed. Special export rates available.

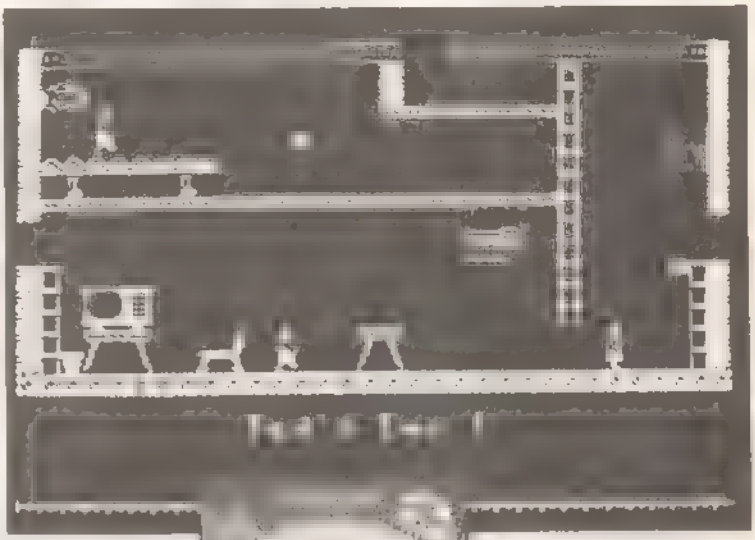
Opus.

Disappointment concerning *Technician Ted* from Hewson's. A good enough game in its day it now looks long in the tooth and I don't quite understand their reason for adding to the size of this amiably daft arcade adventure. Similarly, *The Rocky Horror Show* from CRL has gained too little to make such improvement on the original. It's just a slightly louder, three voice version of The Time Warp.

Talking of music, I'm still to see the bigger, better version of Melbourne House's *Music Box*, which has lost its Wham tag (that should double sales as people are no longer scared off by the picture of the deadly duo). Apparently it still retains its odd system of notation but the sound is much improved by the new chip and it's one of the few programs to properly exploit the machine.

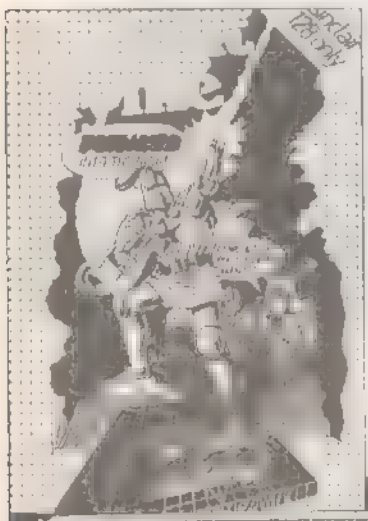
We're also still waiting for *Fairlight 128* from The Edge, who tell us that Swedish programming ace Bo Jangeborg got quite carried away adding new passages and areas which provide alternative methods of solving the secret of Castle Avars. A brief sneak preview indicated improved music too, plus some new skeleton guards and a grisly death mask that appears when Isvar loses his life – so grisly, in fact, that it's likely to be removed from the release version!

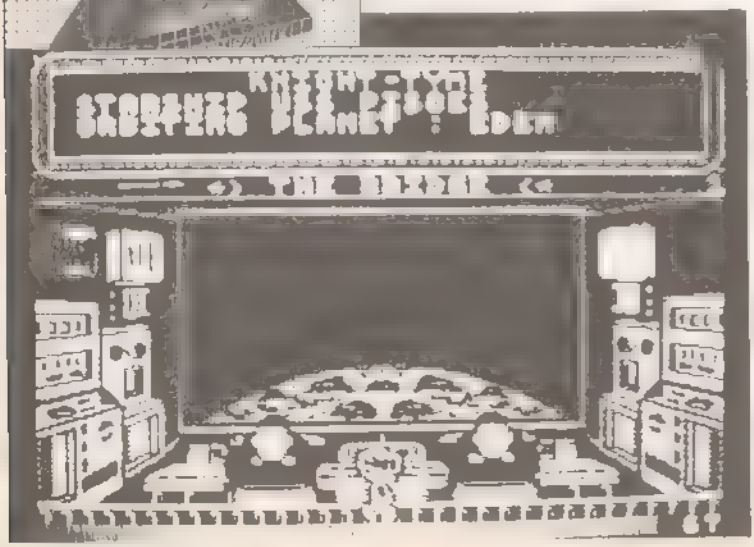


It's to be hoped that Bo is now hard at work on *Fairlight II* which is being designed specifically with the 128 in mind. And on the subject of The Edge, they're still promising us graphics package *The Artist* for the 128 with a host of features, plus word processor *The Writer* which will also take advantage of the expanded memory.

There are several games here for which bigger does mean better, which is all very well, but I still reckon you'd have to be a double sized fan to duplicate with double memory versions if you are merely upgrading. There is one software house who have put their faith in the machine to such an extent that they've developed an entirely original game for it though. That company is Mastertronic and their title, retailing at only £2.99 in the MAD range, is no cheapo quickie either.

Knight Tyme is a highly successful sequel to animated graphics adventure, *Spellbound*. This time Magic Knight is cast adrift on a spaceship and has to find his way back to his own time with the help of its various odd inmates. Once again the brilliant windowing system has been used for commands but the real advantage of the increased memory size is the number of locations.





Potential

At first it may all seem rather limited, but that's only because nobody will listen to you except two droids and the ship's computer. Solve the problem of gaining some authority and you can command the captain to fly you to the moon – or round the galaxy – at least, in search of a solution to your temporal tantrum.

So full marks to Mastertronic for producing the first crucial 128 purchase. Others are sure to follow now the machine is credibly priced and seems set at the low end of the Spectrum market (what will the software houses make of the even bigger version, rumoured to be on the way?). Until then shell out a meagre £2.99 but spend the rest of your money carefully until programs that properly address the RAM's potential appear. ◄

Try beating our SpecDrum!

WD Software

For the SINCLAIR QL:

JOSS **£15 on mdv or 5¼" flp, £17 on 3½" flp**

Forget syntax errors and mistyped names in file commands! Just move a cursor and press SPACE. Cursor keys or joystick allows access to up to 8 microdrives and all the discs your interface will handle, with up to 150 files on each. Scroll & print directories. COPY, DELETE or PRINT any file, select TV or Monitor mode before LOADing/RUNning a program. Use keyboard only to set date or label a medium. Easy to use with *Psion* or other software. No silly icons to learn — JOSS will tell you what [illegible] doing! Mass copying printing utilities and programmer's toolkit. Specify disc size, tracks and interface (*CST, Cumana, PCML, MicroPeripherals*) or microdrive only

RefQL7 **£11 on 2 mdvs or 1 3½" flp, £9 on 5¼".**
For use with *ARCHIVE 2*, contains 1300 useful references and a search/print program. Find programs, articles and reviews buried in the magazines on your shelf! Cheap updates of earlier edition

Mdv extension cable (8") **£5.50.** Add ZX Microdrives to your QL
Joystick Adaptor **£4.99**

For the QL, Spectrum (all), BBC & Electron:

WD Morse Tutor **£4 cassette, £6 mdv or 5¼", £8 3½".**
Teach yourself to read Morse Code. From absolute beginning to 18 words/minute. Feedback on screen or printer. Random letters, numbers or mixed, 100 random sentences, many helpful features include phonetic speech via Currah Micro-Speech (Spectrum). Discs unsuitable for BBC B+

For the Sinclair Spectrum (48/128k):

WordFinder 2 **£8 cassette**
16,000 word vocabulary, 3 to 10 letters long.

WordFinder 3 **£10 on mdv or 5¼" disc, £12 on 3½".**
19,000 word vocabulary, 3 to 12 letters long. Solves anagrams and missing-letter words. Very fast machine code. Update *WordFinder 1* for [illegible].

Spectrum disc versions are Opus, TR (Beta) and SPD1.
We export hardware and third-party software. Ask for lists.

Payment
In advance, in STERLING or British bank branches, International Giro, Postal Order or ACCESS/MasterCard. Add [illegible] outside Europe for AIRMAIL.

Ramball rampage!

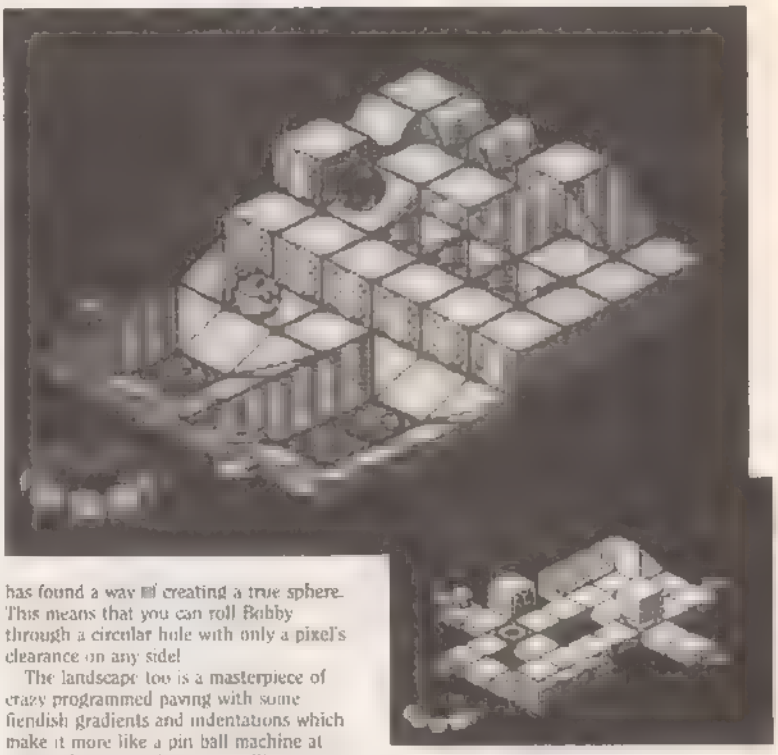
JOHN MINSON PREVIEWS THE EDGE'S TECHNICALLY STUNNING NEW SPECTRUM GAME, BOBBY BEARING

There are still pleasant surprises to be had in the software industry. One of those came the way of Tim Langdell of The Edge recently in the shape of Fig. Fig is two brothers, Trevor Figgins who does the screen design and Robert who does the programming and who literally walked in off the street with a cassette.

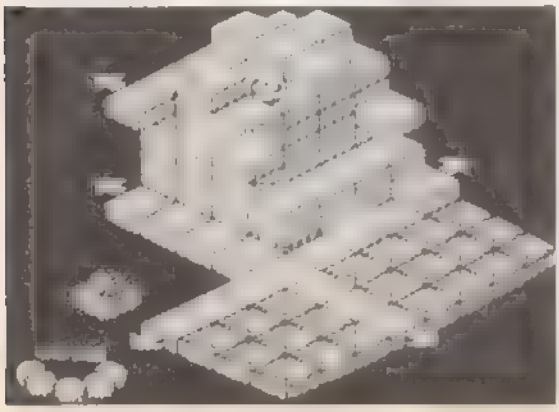
"I'm not very good at writing code," he explained to Langdell. What appeared on the screen gave the lie to that statement immediately. Prior to this Fig had made some contributions to 16/48 tape magazine but though the graphics had been great they were lacking in game play. But though this was his first real game, Robert Figgins had done things that Tim Langdell had previously thought impossible. So impressed was he that he consulted *Fairlight* programmer Bo Jangeborg, who also marvelled at the techniques employed. Robert hadn't realised that you weren't supposed to be able to do certain things – and had just gone ahead and done them!

The game in question is available at the end of May and goes by the name of *Bobby Bearing*. If that suggests a *Marble Madness* style program, you wouldn't be far wrong which means it's entering an increasingly competitive market with the likes of *Quazatron* and *Spindizzy*. But, *Bobby Bearing* has enough features that are unique and endearing to turn it into something special.

The first of these is none other than spherical hero Robert Bearing Esq. He's hardly your standard bland ball as he's got an expressive face which registers pain when you allow him to bump off a cliff. He's also an example of ingenious programming. While circular objects in previous games of the type have had to be held in the micro's memory as cubes, Fig has found a way of creating a true sphere. This means that you can roll Bobby through a circular hole with only a pixel's clearance on any side!



The landscape too is a masterpiece of crazy programmed paving with some fiendish gradients and indentations which make it more like a pin ball machine at times. The speed of Bobby's rolling progress round the curves is impressively smooth. Normally you'd avoid getting crushed below the falling blocks but allow yourself the masochistic luxury just once so that you can admire the animation which allows Bobby to be squashed and note that the higher the hammer, the flatter our hero gets!



So to the plot. Bobby's family has been kidnapped (ballnapped?) by the evil bearing muggers who you'll recognise from their sharpened teeth. He has to locate and rescue his brothers then when the fraternal task's complete he goes for the hardest part, to retrieve his cousin. This is a quest that only a Ramball could complete.

His mission is made dangerous not only by the evil balls who have various levels of intelligence, some being clever enough to lie in wait to push Bobby off a ledge as he rolls by, but also by crushers, magnets and air-ducts. These last mentioned cause course problems when it comes to keeping to the straight and narrow though they can also be beneficial because some are linked to switches and if you manipulate them correctly they will help you on your way.

Once a sibling has been located Bobby has to push him back to safety, and if you thought dodging all those hazards was bad enough alone, you wait till you've got the added burden of a brother to propel past the traps. Naturally momentum has been included to make it all especially nasty.

There are 150 screens of this, which flip smoothly as Bobby moves across them, and the price has been set at a bargain £7.95. This is £2 cheaper than standard Edge price and has been done, Tim Langdell explains, because of his faith in the program's sales potential. Going by my preview, I can only agree. *Bobby Bearing* is certainly more than just another load of old balls!◀

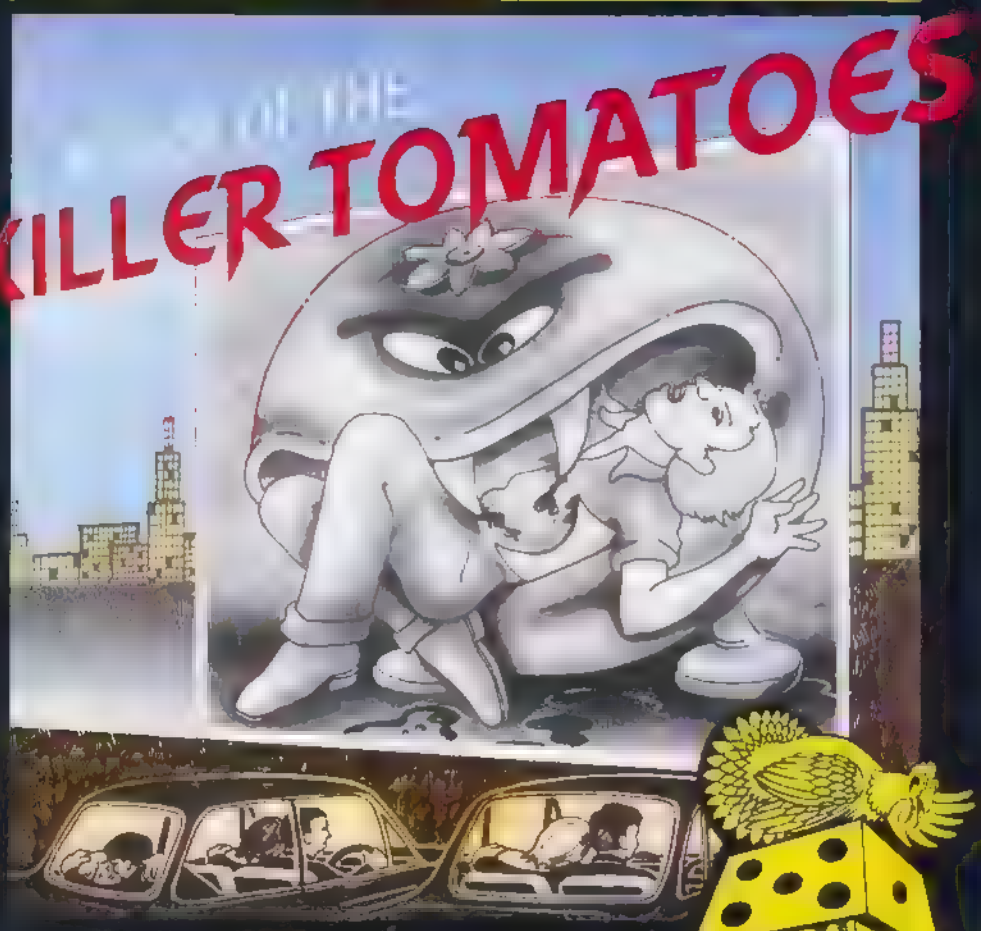
Let the good times roll!

Introducing "Curvispace 3D"

Experience the 3D arcade game you've all been waiting for from the producers of the award winning "Fairlight"

Nominated for the "Worst Vegetable Movie of all Time"

KILLER TOMATOES



A GLOBAL GOLDEN TURKEY PRODUCTION

Squash 'em or be squashed

Based on one of those all-time lows in the world of movie making that were actually nominated for a Golden Turkey Award, the Attack of the Killer Tomatoes squelches on to your screens courtesy of Global Software.

It's a bit of a saucy, really. There's Wimp Plasbott, working away in the PuraTom (tm) processing plant, when suddenly, several hundred killer tomatoes turn on you.

Rotten, aren't they?

All you have to do is to help Wimp keep the Pizza Parlours well supplied with purée while attempting to hammer the reds before they can do the same to you.

Sounds absolutely killing doesn't it?

But can you stand the sight of rivers running red? And have you got the bottle for it?

If you haven't, hard squish!

Available for: Spectrum 48K, all Amstrad CPC machines and all MSX 64K machines

Available through all good dealers

Evesham Micros
THE UTILITY SPECIALISTS

Check out these offers on top quality dot matrix printers. All the models offered are substantially reduced from the normal high street prices. Prices are fully inclusive of VAT, delivery and lead to suit any computer with centronics parallel printer port (eg. Amstrad, BBC, Enterprise, Atari ST, Oric, Dragon, Memotech or MSX). For the C64/128 we supply a user port centronics cable. For Spectrum or QL owners an appropriate interface is supplied for an extra £20 (or for Atari models other than the ST an extra £30.00). Delivery is by (insured) recorded delivery and orders are despatched the next working day after receipt provided we have stock.

JUKI 5510

Our best offer yet! This printer has a recommended price of £299.00 plus VAT. It is a very versatile unit. 180 cps draft (count 'em!) and 30 cps near letter quality. Both modes are bi-directional with logic seeking for the quickest print direction. Has front panel controls for all the usual functions such as line feed, form feed, micro spacing, select, pause, etc. Can select the alternative character set which includes all the European characters. Also has a self test facility. Can be upgraded to COLOUR. A unique, easy to use, ribbon change system is used (£12.00).

High quality three pass N.L.Q. for professional appearance.
Many other features including proportional spacing, bi-directional, logic seeking, vertical and horizontal tabs, user definable characters, and many more.
Good underline
Many other features including optional colour kit.

ONLY £219.95

PRICE INCLUDES CENTRONICS LEAD TO SUIT YOUR MICRO
TRACTOR UNIT FOR CBM/PET/VIC £49.95 (state which model required)
FRICTION FEED £39.95
If you would like a printer sample with further information on any model please send 5 x 4"

TATUNG TP100

Bulk purchase allows us to offer this highly popular, high specification printer at an unheard of price. It is from the same manufacturer as all of your micro's spare parts. Is a Standard Tatung TP100 and Silentype CP40. This make of printer required to be the most popular on the UK market. Many superb features. Three operating modes which provide real "daisy" type text plus a nicely formed 20 cps near letter quality print at 100 cps. Friction and tractor feed are standard. It has a full graphics facility. Take a look at these unretouched, actual size print samples:

Standard PICA text (100cps)
PICA text emphasised
True descenders on jpg etc.
ELITE mode gives 96 column
CONDENSED mode gives 132 column
ENLARGED mode
superscripts and subscripts
underlining nicely
italics available in all modes

MAZE

by Dilwyn Jones

Following on from last week this second program is a simple 3D maze game using both the *Make A Maze* routine and a *MAP* routine. The object of the game is to find your way through the maze in as short a time as possible. At any time you may ask for a map of the maze if you lose your way, but this wastes valuable seconds! The controls are:

N – move or turn to face North
E – move or turn to face East
S – move or turn to face South
W – move or turn to face West
M – Help!! I need a map!!
ESC – I give up . . . get me out of here . . . (ie Quit)

When you eventually find the exit, the program tells you how long it took and asks if you want another game. The size of the maze is set from two to ten across or down at random and is different for every game (random number generator permitting). The maze creation routine may take several seconds to make the maze, in common with other routines of this type.

The view you are given of a 3D perspective effect, looking down the corridor, with openings shown as appropriate. It's slightly slow due to the use of *fill*, so leave out these commands if you want to speed it up a little.

There is no limit to the size of the maze except available memory and how long you're prepared to wait for a maze to be generated - remember that a ten by ten maze will take more than twice as long as a five by five maze.

If anyone would like copies of both programs, send £2.50 plus a formatted microdrive cartridge/floppy disc (5¼" or 3½") to: Dilwyn Jones, 4 The Crescent, Bangor, Gwynedd LL57 2AA.

DATA ENTRY

by Tony Dexter

One activity that is common ■ almost all data processing is the need to enter, display and update or correct records. To do this in Sinclair Basic one can use the obvious method of prompting for each item ■ data in turn with a line such as

```
10 INPUT "Type the letters ■ your NAME, then Press ENTER";IS
```

You then follow with some form ■ error checking routine. There are disadvantages with this method, since errors realised after the Enter key has been pressed, cannot be corrected. It is also difficult ■ know just where you are unless previous entries are displayed.

A more desirable method would display all data prompts and the associated fields on the screen at the same time. Editing would be possible for any of the fields, at any time.

This program shows that friendly input can be achieved on the Spectrum, and it is intended that this program could form ■ party of any larger program where multiple data entry is required. It provides the following features:

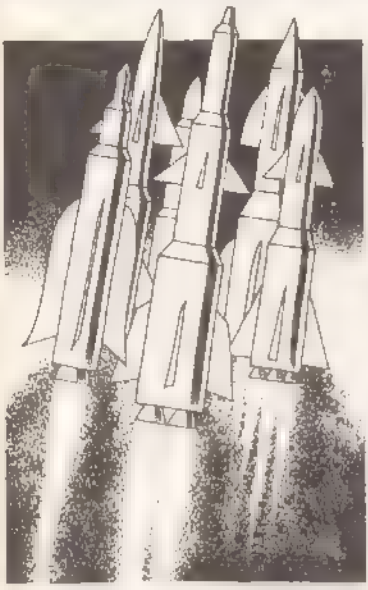
1) All input fields are displayed on the screen, together with prompts and instructions.
2) When Enter is pressed the cursor skips to the start of the next field.
3) Any Data in any field may be altered, either at the time of entry or after all fields have been filled.
4) Editing employs the cursor keys for speedy alteration.
5) Overtyping, Backspace, Delete and Space are permitted.
6) The program protects against over-long Data entries.
7) The Data saved is displayed when entry and editing is completed.
8) Data may be re-displayed and the program put in Edit mode to allow minor corrections and updating to take place.

The listing should prove simple to follow, and is well peppered with Rem statements to explain the various phases. It should be noted that the layout of the screen and the number and lengths of data strings may be altered.

For the sake of illustration it has been assumed that this routine is part of a program which requires the entry of Names, Address and Date of Birth. Obviously this could be any other information - Club Membership Records, Customer Sales Details, etc.

For editing and error trapping reasons all entry is by String$ input and numbers are entered as numerical characters. If your program required numerical processing then the relevant string$ can easily be transferred to numeric variables or to a numeric array by means of the *VAL* function.

Although this program has been written specifically for the Spectrum, it can readily be adapted by users of other machines.



BANKING

by Richard Tanner

This program is designed to help you keep track of your bank or building society account, on the C128 in 80 column mode.

Type in the program as shown making sure that you are in Business (lower case) mode. The REMs should be typed in exactly as they are, otherwise, as I have found out, the C128 seems to corrupt the line.

When you have finished typing in the program insert a formatted disc, save the program with *Dsave banking*. When that has saved type *GOTO 240* When the menu appears select '1' (save the data so far) this creates an empty sequential file from which the program can read when it boots Don't forget to save the data after you have updated it.

Program Notes

50-130 This sets up the screen in black and white (reversed) and 80c1m. Also the character set is set to lower

150-220 Opens a disc file, reads all of the previous data and puts it into arrays.

240-430 Prints up the menu, takes the selection and jumps to the required subroutine

440-520 Saves all the bank data to a sequential file BANKFILE.

540-600 Inputs data into the bank for crediting

620-680 Inputs data into the bank for debiting

700-730 Prints the up to date balance.

750-990 Prints a statement of all the occurrences in the account to the screen.

1010-1220 Prints a statement of all the occurrences in the account to the printer (set as device 4)

TOOLBOX

by Paul Murray

Just when you thought it was safe to go back to the keyboard... Those of you who were trying to get Paul Murray's *Error* Toolbox command to work from the code published in Vol 8 No 18 will find the listing below of great interest.

Yes – it's the real code, not the series of random numbers previously printed that by amazing coincidence bore a striking resemblance to the *Header* code shown the week before.

Our apologies.

```
64163  02   1    21   1    173

Handy Hints on Amstrad

by K H Denham

Here are two short but handy tips for the Amstrad computers.

The first establishes whether or not a disc drive is attached to a CPC464, which can be used to determine the type of file handling facilities it has offered and whether or not instructions for operating the cassete recorder controls need to be displayed at the appropriate times.

The second is a machine code routine which makes a test for whether or not a printer is on-line. This is very useful since if no printer is attached any attempt to send data to the printer stream causes the computer to "hang". Using this routine a program can check for the presence of a printer before printing and can produce a suitable warning message if necessary

```
10 ON ERROR GOTO 50:!DISC
20 IF TAPE=1 THEN PRINT "NO DISC ATTACHED" EL
SE PRINT "DISC ATTACHED"
30 END
50 IF ERL=10 THEN TAPE=1:RESUME NEXT:ELSE ON
ERROR GOTO 0
```

```
10 MEMORY 39999:rem routine can be loaded to a
ny suitable address
20 FOR X=1 TO 13:READ X$:POKE 39999+X,val("&"+
X$):NEXT
30 DATA CD,2B,BD,D0,DD,6E,00,DD,66,01,36,01,C9
40 a%=0:CALL 40000,@a%
50 IF a%=0 THEN PRINT "Printer not on-line" EL
SE PRINT "Printer OK"
60 END
```

Flash Load on CBM 64

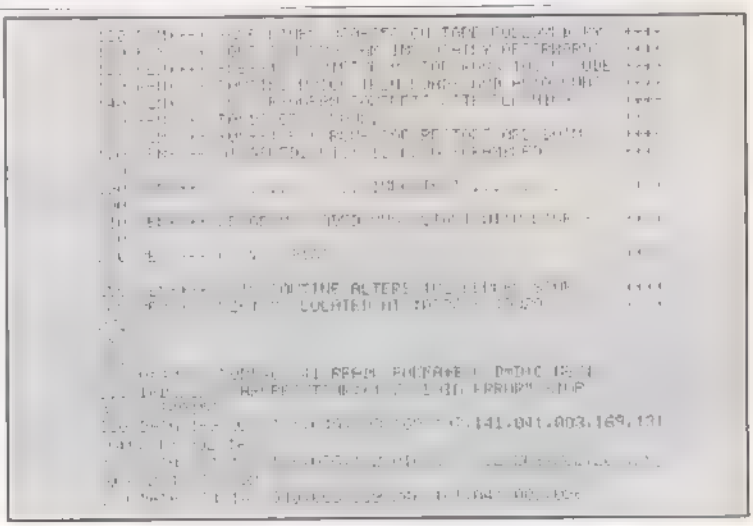
by D W Light

Flash Load is designed to boot your own programs from tape and produce flashing bands of colour during loading.

Run-Stop and *Run-Stop/Restore* are both disabled and *List* is scrambled giving some measure of program protection.

To use, type in Lines 3-35 and save at the beginning of a blank tape. Now load your own program. When loaded, add line 0 SYS 49183 (this turns off the flashing colours and also allows your program to poke M/Code routines into SC000 (49152) upwards, if required).

Finally, resave your program immediately after the 'Flash Load' program. Rewind the tape, pressing Shift/Run Stop will load and run 'Flash Load' which in turn will load and auto-run the next program.



Circle Routine on Spectrum

by P I Berry

As the Sinclair circle routine is so slow, inaccurate and cannot draw circles only partly on the screen, I have developed my own algorithm.

It is approximately twenty times faster than the built-in function, draws perfect circles and it can cope with plotting partly off the screen.

The routine is set up using the Def Fn, with the start address of the code located at 23296. The program is called by FNC with three parameters (x, y, radius). Lines 1-5 set up the routine by poking data into the printer buffer. Lines 55-9 are a short demo – a series of circles are drawn, but the plotting can be skewed left or right using keys O and P.

```
  5 REM      CIRCLE  PROGRAM

Time is of the essence

Chris Jenkins does battle with renegade time lords in the new package from Microdeal

If you've seen three or four avid players huddled around a large cabinet game in the arcades recently, chances are they've been playing *Gauntlet*. Microdeal's *Time Bandit* is of the same style and a very impressive package for the powerful Atari 520ST.

The ST facilities of large memory, fast detailed graphics manipulation and great colour are all used to excellent effect in *Time Bandit* – so much so that the game doesn't support mono monitors.

If it's scenario you want, *Time Bandit* has it aplenty. Writers Bill Dunlevy and Harry Lafnear of MichTron USA are obviously D & D fans; the accompanying booklet includes a verse worthy of the legendary William McGonagall ("The Lords of Time did not interfere,/Afraid that ghastly effects would appear") and an explanatory storyline.

The guardians, renegade time lords who have used the fabled time gates for their own ends, have hidden their treasure in mazes spread throughout the time zones. The creators, inventors of the time gates, want you to retrieve these treasures, and have offered you mucho cash to do so.

The first screen allows you to select one or two player mode, keyboard or joysticks, and to examine the high-score records which are saved to disc.

You can also watch a helpful demo before you begin, although it's much more fun if you leave everything a mystery!

Each leg of the adventure begins from a time gate. Simply move your bandit into it and he will be transported into a maze.

You might have seen many games which resemble the maze sections, but none with this much imagination and detail.

Your bandit moves through deserts, forests, ghost towns, starships and various mysterious blacknesses, firing rockets at a host of enemies – snakes, spiders, lizards, lions, aliens, roving eyes and spooks.

In many of the mazes there are ladders which transport you to other levels, and transporter discs to skip to other locations. In most, there are keys which have to be found in order to get through locked doors, and treasures which give you bonus points on collection.

Look out, too, for scrolls which can give you clues to mystery bonuses. You can leave a maze at any time (if you can find your way to the exit!) but it won't be finished until you have found all the treasures.

There are also one-way doors which will only allow you to pass in a certain direction, so some map-making may be necessary.

Since you can't hope to out-run or outshoot all the baddies, you must go for life bonuses (for every 1000 points). Remember that if you act in a heroic manner, moving quickly and shooting fast, you will earn a higher Manner rating.

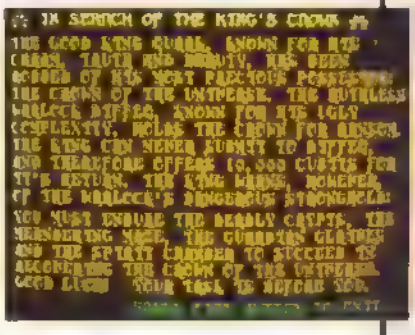
Incredible though it may seem, there are 16 time gates, each of which has 16 levels of difficulty, and all of which you must defeat before reaching The End. Goodness knows how long it would take!

The best thing about *Time Bandit* is that it sends up many of the arcade and adventure games it purports to imitate. There's a Pac-Man section set in a 2-D maze, one part is set on the Starship Enterprise, and somewhere in there is a hidden Space Invaders game!

Another good feature is the two-player mode, in which there are two screen displays (in the same time gate). The two bandits can either work together, or shoot it out between them. The first to die becomes a shadow, which can help or hinder the remaining bandit, shoot creatures and steal treasure, although the score will not advance.

There's also a text adventure section, in which you have to make the correct verb-noun responses in order to find the treasure and escape.

The authors of this program have obviously had fun writing it: don't deny yourself the fun of playing it!



***Time Bandit* is available from Microdeal, at 41 Truro Road, St Austell, Cornwall (0726 68020), licensed from MichTron in the US. It costs £29.95, but, beware, it will only work on the 520ST with a *colour* monitor.**

Programming: Peek & Poke

Design background

R Gleaves, of Bromley in Kent, writes:

Q I have a Spectrum Plus, and wonder if you could explain how I can incorporate my graphic design in my Basic program using the design as a background, or perhaps suggest a book that would cover the subject. I must also explain that I am not very technical.

A As you don't say what purpose the background is going to serve, it is difficult to be specific. However, if you create your design with a utility such as *Melbourne Draw*, you can then drop into Basic and save the design to tape using

```
SAVE "filename" SCREEN$
```

This will save whatever you have on the screen at the time. You can then *Load* it back from your Basic program using the reverse process. Alternatively, you can save the screen to memory using the following routine:

```
10 CLEAR 58430
20 FOR N=58431 TO 58450
30 READ B: POKE N,B: NEXT N
40 DATA 33,0,64,17,83,228,24,6,6,
   33,83,228,17,0,64,1,0,27,237,
   176,201
50 NEW
```

The above program pokes a machine code routine into memory, and can be called the *LET SCREEN=USR 58431*, which pokes your screen into memory. Now clear the screen, and type *LET SCREEN=USR 58439*. Neat, huh?

Legal position

P L Adcock, of Norwich, writes:

Q Twelve months ago I purchased a Bud Interstate 31 joystick interface which has an 18 month guarantee. Unfortunately it has now developed a fault and despite writing and phoning Bud Computers, I cannot contact them. I bought it directly from them so I cannot take it back to a shop. Please could you tell me 1) How to get the interface fixed under its guarantee? 2) What is the legal position the consumer is in when a company goes bust. Does the guarantee have to be honoured?

A You have my deepest sympathy. Your guarantee is basically worthless if Bud Computers have ceased trading. Therefore, there is no way of getting the interface repaired under the guarantee. As a consumer you have no redress against any company which ceases trading, as far as guarantees go. Basically the company is bust and no longer exists. In *Popular Computing Weekly*, May 1, an article on repairing simple joystick faults was published. If your problem goes beyond this, then your only possible way out is to try to get your interface repaired (at your expense I am afraid) by one of the repair companies such as those which regularly advertise in Popular.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Kenn Garroch and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke, PCW*, 12-13 Little Newport Street, London WC2R 3LD

DOCTOR WHO AND THE MINES OF TERROR —A Massive Graphic Adventure with 4-way Panoramic Scrolling. *(86% ZZAP REVIEW)*

The Story so far . . .

The Doctor has at last cracked the code to the safe and obtained the Pass Card, thereby giving him access to all areas of the Rijan Complex, though no immunity against the Master and his Robot Controllers. He continues his search for the TIRU plans and seeks further ways to disrupt the mining and processing of Heatonite.

OBJECTIVES/SCORING. The main task is to escape with the Memory Capsule (containing the TIRU plans). Bonus points awarded for shortest possible time (assuming no use of 'saved-game' option), Stopping the Factory (two options), Visiting each of 8 CSC's, Escaping in the Tardis and Taking Splinx and the Crystal.

The DOCTOR continues his quest . . .

Just above the LH monorail he climbs a series of levels to the Greenhouse. Avoiding controllers he finds a bucket of Chemicals and a Cloth. Nearby is a tank of chemicals of a different colour! Further up is another CSC and also the Anti-Gravity map. Full pockets are now causing him some difficult decisions on which objects to retain. He finds an airlocked exit and discovers why he should have kept the Oxygen handy!

NEXT EPISODE — Into the Control Room . . . Dynamite . . . Escape Pods . . . PCB'S . . .

Any questions?

David Wallin delves into the depths of his mailbag – plus information on terminal software for a variety of machines

This week I'll be sorting out a few more answers to some of your questions.

Firstly, Ian Highton of London wishes to know how to use his Pace modem and Commstar software to access a 1200/75 Bulletin Board, rather than a viewdata board. Well Ian, I contacted Pace itself about this and they came up with this answer: basically, it is the same as with a 1200/75 viewdata board but there are a few alterations to make to the commstar configuration.

Turn on and connect up as per usual. Then go to the Initialise section and select the menu. You select 1200/75 baud, in chat mode.

Now you just continue as if it were a viewdata board. According to Pace this is all you have to do. I assume that the Protocol (word length, parity, stop bits) will be set up automatically. If it doesn't work then I would advise playing around with the settings. Most boards give the protocol when you first log on.

A letter received back in March from Mike Barnes of Morden, Surrey, pointed out some semi-mistakes from previous articles (thanks a bunch, Mike):

1) Modem speed is written transmit/receive. But apparently this was printed once as receive/transmit. 1200/75 means both receive and transmit at 300 bps.

2) Baud/Bps are not the same, Mike points out. This is of course quite true, but there is no visible difference at lower speeds. Bps stands for bits per second. The baud rate of a modem is in fact its modulation rate. Mike writes the actual definition of baud is 'the number of signal elements changes per second'. There may be any number of bits-per-modulation rate of 1600 baud on a 4800 bps modem (tribit/baud).

This is really quite complicated which is why I have not tried to explain it before. Why do so many people think the two terms are the same?

Well, partly because people like me say they are to keep things simple, and also because lower speeds, ie, 300 or 1200 have one-bit-per-baud resulting in equal bps and baud rates.

From now on, I'll be more pedantic. There have been a number of letters about CCITT, (which incidentally stands for The International Consultative Committee for Telegraph and Telephone – why CCITT? The actual definition is French and reads Committee Consultative Internationale de Telegraphique et Telephonique), asking for a list of more of the more common CCITT standards. They're those awkward V (and X) numbers. X numbers refer to data networks and are not applicable here but will be mentioned in the future. For those people, here are some of the other numbers:

V series – these are regulations regarding Data Transmission over telephone circuits.

V3*	–	International Alphabet number 5 (ASCII).
V21	–	300/300 bps
V22	–	1200/1200 bps
V22bis	–	2400/2400 bps, 600 baud
V23	–	1200/75 bps or 75/1200 bps
V24	–	RS 232 interface
V25	–	Intelligent modem (one with a built-in cpu and firmware. Usable with any computer with a full RS232 and some with an RS432. Most V25 modems are auto dial/answer. If you're interested in intelligent modems, Hugo Cornwall's *Hacker's Handbook* (Century) goes into it in more detail).

I have had a number of letters asking for details of Bulletin Boards in a particular area. If you wish to know of boards of a certain speed or format in either a certain area, or the whole country for that matter, then send me an SAE (to the address below) giving firstly, the speeds (1200/75 viewdata, 1200/75, 75/1200, 300/300, 1200/1200 VTX 5000 Spectrum format, 1200/1200 full duplex or Bell speeds) you are interested in; secondly, the area(s) in the country (Scotland, South East, South West, Wales, Northern Ireland, Midlands, London, the North, Channel Islands), and thirdly, anything else you feel may be important.

As all the boards I know are held on a database, I will be able to look up the boards that comply to your requirements in seconds and get a printout sent off. But please enclose that SAE, as postage costs are high.

Lastly for today, Terminal Software. I have had a few letters about terminal software for a modem, particularly the Protek 1200. If you don't have that much money, then look in any good communications book and you may find a listing. *The Hacker's Handbook* for the BBC (this is not *The Hacker's Handbook* by Hugo Cornwall, but by Geof Wheelwright and Ian Scales, and published by Longmans at £4.99), includes a good piece of BBC terminal software.

This book is also available for the Spectrum and Commodore 64/128. If you are prepared to spend more money then read on:

- CP/M machines (PCW, CPC, Einstein etc.) – Comm Plus (Modem House) approx £65.
- Spectrum 128 – Modem House is apparently developing a new piece of terminal software for the 128. News on that when it is released.

Spectrum 48K plus VTX 5000

- Spectrum 48K + VTX 5000/RS 232 port plus modem – Stephen Adams has written software for both of these. Look in the back of some of your older PCWs for information. Approx £5 or so.
- Others – Modem House (again) produces complete packs of software and hardware for everything from a QL to a Mimi 805 to a Zorba. So it may be able to help you. Modem House can be contacted on 0392 213355.

Lastly, the gremlins have been at this column again: a few weeks ago there was the article on FBBS (Finchley Bulletin Board Software), and somewhere along the line the MusicTel number was changed from 01-455-0843 to 01-458-0843. Apologies to whoever the wrong number belongs to. MusicTel is on 01-455-0843 and is 1200/75 (bps) and 300/300.

If you have any queries, tips or comments to make about any aspect of micro communications, David Wallin would love to hear from you.

Write to him at *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

ROMANTIC ROBOT present

No1 MULTIPURPOSE INTERFACE FOR 48K & 128K SPECTRUM*

multiface one ™ Version 48

New again! NEW ENHANCED VERSION AT THE OLD PRICE OF £39.95!
WITH MORE HARDWARE & SOFTWARE THAN EVER BEFORE AND
WITH MORE FEATURES THAN YOU FIND ON ANY OTHER INTERFACE

- Internal 8K ROM & 8K RAM enable FULLY AUTOMATIC saving of anything, anytime onto MICRODRIVES, WAFADRIVES, BETA, OPUS, KEMPSTON and TAPE with extra 8K at user's disposal and with an extensive MULTI TOOLKIT to study/modify/develop/programme.
- Plus a joystick interface (IN 31, i.e. Kempston compatible) and a switch to make MULTIFACE ONE INVISIBLE.
- MULTIFACE ONE does not take any part of Spectrum RAM and does not need any additional software. Just push a button to freeze a program, save it and restart from the same point next time.
- MULTI TOOLKIT facilities allow to PEEK/POKE the entire 56K, show blocks of RAM with on-screen editing and decimal hex or ASCII display, enable programmable jumps to anywhere within 56K, etc.
- Menu-driven with prompts and one-touch commands: 1) Push button 2) Select function: save/return/save/tool/copy/jump 3) Input name 4) Save to tape/cartridge/wafer/opus/beta/kempston (if using Kempston please specify when ordering)
- Extremely *powerful and efficient compressing* for fast re-loading & using maximal room on cartridges, tapes, wafers, disks.
- Option to SAVE a screen only ✱ COPY screen to printer (for printers interfaces accepting COPY command)
- Through extension bus for connecting other peripherals ✱ User-friendly, fully error-trapped, guaranteed, *simply magic*.
- *Programs saved with MULTIFACE can RUN independently* ✱ 128K Spectrum usable in 48K mode only on Version 48 ✱

Expand your Spectrum to 56K and stretch its capabilities even further with

multiface one ESSENTIAL SPECTRUM COMPANION

TRANS-EXPRESS
The software way of transferring Spectrum software.
4 utilities for m/drive, 2 for wafadrive, 2 for Opus Discovery, invaluable for cartridge desk, wafer/drive & automatic transfers, highly professional, user-friendly, versatile and comprehensive. An ingenious piece of software.

New Releases

John Cook looks through this week's new arrivals

Amstrad

Program *Tank Commander* **Type** Arcade **Micro** Amstrad **Price** £9.95 **Supplier** Amsoft, Victoria House, PO Box 10, Sunderland, SR1 3AV

Tank Commander has been out on disc for quite a bit – in fact, the instruction manual still tells you to type 'Run "Disc"' to load the program. But now that it's on tape, a lot more people are going to be able to play this quite enjoyable little game.

If, say, *Masterfile II* is the meat and two veg of the Amstrad market and *Get Dexter* the pâté de fois gras, then *Tank Commander* is a couple of Big Macs and large fries. The scenario has you controlling a tank in enemy infested territory – your task, to rescue friendly agents without getting blown up

There are three screen displays – an overall map, showing you the location of your agents, a tactical map showing your immediate whereabouts (this is the screen you move around on) and a Battle screen. If you need to hang a label on it, this part is a cross between *Beachhead* and *Battlezone*.

Great use is made of colour (lots of pastoral green) and, although the action isn't going to get the pulse racing way over 160, it's an agreeable enough combination of gentle strategy and colourful arcade. I wish Amsoft would knock a couple of quid off their prices, though.

Program *Music Box* **Type** Utility **Machine** Amstrad **Price** £9.95 (cassette) £16.95 (disc) **Supplier** Electric Studio, PO Box 96, Luton, Beds LU5 2JP

Program *Heavy on the Magik* **Type** Adventure **Machine** Amstrad **Price** £13.95 (disc) **Supplier** Gargoyle Games, 74 King St, Dudley, West Midlands

Program *The Pace Compilation* **Type** Arcade **Machine** Amstrad **Price** £2.95 **Supplier** Pace Software, 40 Bainton Grove, Clifton, Nottingham NG11 8LG

Program *Masterfile II* **Type** Utility **Machine** Amstrad **Price** £33 (disc) **Supplier** Amsoft, Victoria House, PO Box 10, Sunderland SR1 3AV

Program *Strangeloop* **Type** Arcade **Machine** Amstrad **Price** £13.95 **Supplier** Amsoft, Victoria House, PO Box 10, Sunderland SR1 3AV

Program *Shogun* **Type** Strategy **Machine** Amstrad **Price** £9.95 (cassette) £14.95 (disc) **Supplier** Virgin Games, 2 Vernon Yard, 119 Portobello Road, London W11.

Atari ST

Program *Menu+* **Type** Utility **Machine** Atari ST **Price** £19.95 **Supplier** Metacomco, 26 Portland Square, Bristol BS2 8RZ

Atari

Program *Racing Construction Set* **Type** Arcade **Machine** Atari **Price** £14.95 **Supplier** Ariolasoft UK, 68 Long Acre, London WC2

Program *Savage Pond* **Type** Arcade **Machine** Atari **Price** £2.99 **Supplier** Bug Byte, Liberty House, 222 Regent Street, London W1R 7DB

Program *Kikstart* **Type** Arcade **Machine** Atari **Price** £1.99 **Supplier** Mastertronic, 8-10 Paul Street, London EC2

Commodore 128

Program *Kikstart* **Type** Arcade **Machine** Commodore 128 **Price** £4.99 **Supplier** Mastertronic, 8-10 Paul St, London EC2 4JH

Program *The Last V8* **Type** Arcade **Machine** Commodore 128 **Price** £4.99 **Supplier** Mastertronic, 8-10 Paul St, London EC2 4JH

If my memory serves me correctly, this week sees the first Commodore 128 dedicated games software hitting the streets – from all places, Mastertronic.

Both the above releases are 'enhanced' versions of existing 64 programs: *Kikstart* and *The Last V8*. The former, loosely based on the similarly named occasional TV series, equally loosely based on off-road motor-cycling, will only appeal to real Clumsy Colin *Action Biker* headbangers.

The Last V8, however, is worth more than a passing look and a passing listen in fact because, as before with the 64 version, the best things about the 128 version are the graphics and the sound.

Rob Hubbard's soundtrack is as excellent as it ever was (accept no imitators) and the screens are colourful and detailed.

If you want to impress aged relatives that computers really are tabby, then this is still the program to put up. However, instead of the single 'race against time' senario, this version has three. The first has you driving your V8 round the surface of Mars, picking up fuel rods (15 of them), avoiding craters (judging by the number of potholes, the gas board has been very active on Mars recently) – then off to Earth, for the second section.

This part is the most similar to the original game. Lastly you race around avenues under the Earth city, avoiding radiation areas (a bit like going on a Russian coach tour I suppose) to reach the HQ.

Well, it's all good clean fun, but it's still basically as unplayable as ever. And there's still that annoying little flicker on the bottom of the play screen. Still, with both titles going for £4.99 a piece, most complaints are going to be drowned out by the ringing of cash registers. Great value, at least as far as *Last V8* is concerned.

Pick of the week

Cauldron II

Program *Cauldron II* **Type** Arcade **Machine** Commodore 64 **Price** £8.99 **Supplier** Palace Software, 275 Pentonville Rd, London N1 9NL

Palace may not be the most prolific software house in the world – but when it does produce something, it's always worth looking at. *Cauldron II* is no exception. A clue to the scenario can be gleaned from the sub-title, *The Pumpkin Strikes Back*.

Remember last time (*Cauldron I*) when you were the witch, trying to defeat the evil pumpkin? Well, this time, you play the last surviving pumpkin, trying to do the dirty on the now all-powerful witch queen. Tough at the top, isn't it?

It is your yellow lumescent pumpkin's task to bounce around the 100-odd roomed witch's castle, collecting important articles (you know they are important because they flash) avoiding nasties, zapping every now and then, in order to cut a lock of hair from the witch's head and then drop it in a cauldron in the bowels of the castle to destroy her power.

The game departs from *Cauldron I* in that it lacks the scrolling landscape which was one of its major features. Now you bounce along from screen to screen – again very nicely designed by Steve Brown – and it's really quite fun.

Somehow it reminded me of *Underwurlde* and *Thing on a Spring*, with better graphics than the former but without the continuous soundtrack of the latter. As a sequel, it stands up quite well.

C16/Plus 4

Program *Kikstart* **Type** Arcade **Machine** C16/Plus 4 **Price** £1.99 **Supplier** Mastertronic, 8-10 Paul Street, London EC2

Program *Return of Rockman* **Type** Arcade **Machine** C16/Plus 4 **Price** £1.99 **Supplier** Mastertronic, 8-10 Paul St, London EC2

Program *Hektik* **Type** Arcade **Machine** C16/Plus 4 **Price** £1.99 **Supplier** Mastertronic, 8-10 Paul Street, London EC2

Program *Mercenary* **Type** Arcade **Machine** Plus/4 **Price** £9.95 **Supplier** Novagen, 142 Alcester Road, Birmingham, B13 8HS.

No doubt there are a lot of pretty disgruntled Plus/4 owners out there at the moment. What with the heavy discounting around Christmas in the big electrical chains, the fact that the built in software is only disc compatible (however, there is now an add-on to make it work with tape), and almost all the games are 'C16 and Plus/4' that is, stuff that runs on the C16, so it will also run on its Big Brother, it's no surprise

But now there's some good news for Plus/4 owners – go out and treat yourself to *Mercenary*.

You've seen it on the Atari, you've seen it on the 64 - well now Novagen has taken the bold step of converting it for the Plus/4 in the hope that quality starved owners will flock to it in their thousands.

Novagen claims that the game play is exactly the same – and I've yet to find anything to disagree with that. The same 3D vector graphic combination of flight simulator arcade adventure with the same stranded-on-Targ plot; it looks nice, more like the Atari version if anything.

Still, back at the Plus/4, it may well be the most expensive piece of software that you've yet bought for your machine, but I'd be surprised if you were disappointed.

Commodore 64

Program *Southern Belle* **Type** Strategy **Machine** Commodore 64 **Price** £7.95 **Supplier** Hewson, Hewson House, 56B Milton Trading Estate, Milton, Abingdon, Oxon OX14 4RX

Program *Max Headroom* **Type** Strategy **Machine** Commodore 64 **Price** £9.95 **Supplier** Argus Press Software, Liberty House, 222 Regent Street, London W1R 7DB

Program *Ollo I & II* **Type** Arcade **Machine** Commodore 64 **Price** £2.99 **Supplier** Bug Byte, Liberty House, 222 Regent Street, London W1R 7DB

Program *Shogun* **Type** Strategy **Machine** Commodore 64 **Price** £9.95 (cassette) £12.95 (disc) **Supplier** Virgin Games, 2 Vernon Yard, 119 Portobello Road, London W11.

Program *Standing Stones* **Type** Adventure **Machine** Commodore 64 **Price** £14.95 (disc) **Supplier** Ariolasoft, UK, 68 Long acre, London WC2

Program *Cat-Kit* **Type** Utility **Machine** Commodore 64 **Price** £34.95 **Supplier** Ariolasoft UK, 68 Long Acre, London WC2

Program *BiGraph* **Type** Utility **Machine** Commodore **Price** £29.95 **Supplier** Ariolasoft UK, 68 Long Acre, London WC2

BBC & Electron

Program *Enthar Seven* **Type** Adventure **Machine** BBC **Price** £17.95 (40 track disc) £16.95 (80 track disc) **Supplier** Robico Software, 3 Fairland Close, Llantrisant, Mid Glamorgan CF7 8QH

Program *Savage Pond* **Type** Arcade **Machine** BBC/Electron **Price** £2.99 **Supplier** Bug Byte, 222 Regent St, London W1R 7DB

Program *Jack Attack* **Type** Arcade **Machine** BBC/Electron **Price** £2.99 **Supplier** Bug Byte, Liberty House, 222 Regent Street, London W1R 7DB

Spectrum

Program *Redhawk* **Type** Adventure **Machine** Spectrum **Price** £8.95 **Supplier** Melbourne House, 60 High Street, Hampton Wick, Kingston-Upon-Thames, Surrey KT1 4DB

Program *The Force* **Type** Strategy **Machine** Spectrum **Price** £9.95 **Supplier** Mind Games, Liberty House, 222 Regent Street, London W1R 7DB

Program *Pace Compilation* **Type** Arcade **Machine** Spectrum **Price** £2.95 **Supplier** Pace Software, 40 Bainton Grove, Clifton, Nottingham NG11 8LG

Program *The Planets* **Type** Arcade **Machine** Spectrum **Price** £9.95 **Supplier** Martech, Martech House, Bay Terrance, Pevensey Bay, East Sussex BN24 6EE

The Planets is a program of impressive scope, using, it is claimed, over 125K and loaded in several sections. I had some doubts about it because it is one of those programs which claims to be simultaneously, a state of the art arcade game and of great educational value. Usually such programs are poor examples of both types.

The educational aspect of *The Planets* is its detailed presentation of the main features of the solar system.

The game involves travelling to each of the eight planets in the solar system, landing and then finding a capsule, each capsule may be unlocked by a code word, you are told the first but must discover the others for yourself. All this is somehow linked to the playing of a strange alien game and the ultimate salvation of earth

In terms of actual play, landing on the planets is really a sort of *Lunar Lander* where you have gravitational pull against thrust power and directional jets to reduce your speed on landing to a safe level.

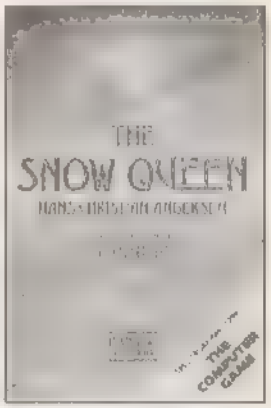
However, it's the alien game that had the office hooked – what do you do? What does it mean? Try it.

Program *The Price of Magik* **Type** Adventure **Machine** Spectrum **Price** £9.95 **Supplier** Level 9 Computing, PO Box 39, Weston-Super-Mare, Avon BS24 9UR

Program *Character Designer* **Type** Utility **Machine** Spectrum **Price** £4.50 **Supplier** GAP Software, 17 St John's Terrace, London E7 8BX

Program *Designer* **Type** Utility **Machine** Spectrum **Price** £8.95 **Supplier** GAP Software, 17 St John's Terrace, London E7 8BX

Program *Snow Queen* **Type** Adventure **Machine** Spectrum **Price** £9.95 **Supplier** Mosaic Bookware



Program *Mantronix* **Type** Arcade **Machine** Spectrum **Price** £7.95 **Supplier** Probe Software, 155 Mitcham Road, London SW17 3LN

Program *Sword and Shield* **Type** Strategy **Machine** Spectrum **Price** £5.95 **Supplier** Black Night Computers, PO Box 132, Chiselhurst, Kent BR7 6LJ

MSX

Program *Journey to the Centre of the Earth* **Type** Adventure **Machine** MSX **Price** £2.99 **Supplier** Bug Byte, Liberty House, 222 Regent Street, London W1

Sharp

Program *Pace Compilation* **Type** Arcade **Machine** Sharp MZ700 and Sharp MZ800 **Price** £2.99 **Supplier** Pace Software, 40 Bainton Grove, Clifton, Nottingham NG11 9LG

VIC

Program *Viva Vic* **Type** Arcade **Machine** Vic 20 **Price** £6.50 **Supplier** Llamasoft, 49 Mount Pleasant, Tadley, Hants
